RULES AND REGULATIONS RELATING TO EXHIBITS.

1. All exhibits must be *bonâ fide* the property of the exhibitor.
2. Competition for prizes shall be open only to exhibitors resident in the Colony of the Straits Settlements or the States of the Malay Peninsula.
3. Exhibits for competition in division E, "Native Industries, etc.," shall be confined to articles manufactured in the Colony of the Straits Settlements or the States of the Malay Peninsula.
4. The Committee will appoint Judges, from whose decision there shall be no appeal.
5. The Judges will have authority to withhold a prize when they are of opinion that there is not sufficient merit to justify an award, and also to award special prizes for anything not contained in the schedule.
6. No exhibitor shall be awarded two prizes in any one class, or more than five prizes in the same division.
7. The arrangement of the exhibits shall be subject to the directions of the Committee.
8. The Committee reserves to itself the right to refuse any entries that they may think fit to reject, and to cancel any class at any time up to seven days previous to the first day of the Show.
9. Exhibitors desiring free transport must give notice to the District Officer or the Secretary, who will, if they approve of their exhibits, provide them with numbered tickets and a free pass on the railway for themselves and their exhibits.
10. Exhibits will be received between noon and 6 p.m. on the day previous to the Show, and between 6 a.m. and 8 a.m. on the opening day. No exhibit will be received after 8 a.m.

11. Entries for Horses and Dogs close on 25th July. Entries for Horses under Classes 1, 2, 3, 5, 6, 7, 9 and 10 must be accompanied by a certificate of height from any Sporting, Turf or Polo Club in the Colony or F.M.S., or from a qualified Veterinary Surgeon.

12. Exhibitors in Divisions C and D must provide for the care and maintenance of their own exhibits.

13. No exhibit (except live animals) may be removed from the ground before the close of the Show. Exhibitors will be provided with a card which must be produced at the close of the Show before they can be allowed to remove their exhibits.

14. The General Secretary is empowered to exclude, or remove, any animal which in his opinion is not in a fit state for exhibition.

15. Exhibitors in Divisions C and D will only be permitted to remove their animals from the Show Ground on obtaining an order of removal from a member of the Committee.

16. All reasonable care will be taken to provide for the safety and careful preservation of exhibits of every kind sent to the Show ; but it must be clearly understood that the Committee does not hold itself responsible for the loss of, or the damage to, any exhibit either in transit or during exhibition. Provision will be made for keeping valuables under lock and key at night.

17. Space will be provided for tradesmen and others wishing to exhibit articles for sale but not for competition. All purchases will be subject to the above rules and regulations, and the sale price must be clearly specified.

18. Government exhibits shall not be eligible for prizes in any class.

Winners of prizes of \$10 and upwards—Silver medal or value, optional.

152. Ag. Hol. G. C. 1

MITES IN RUBBER NURSERIES.

My attention has lately been attracted to several cases where the seedlings of the "Para" rubber tree presented a somewhat unhealthy appearance, and on more than one occasion I have been assured that this was their natural appearance during, or immediately after, a spell of dry weather. It is evident, however, that all is not as it should be, and if the growing point or the very young leaves are closely examined, a minute insect will generally be observed moving rapidly about, chiefly on the under side of the leaf.

This is not a true insect, but one of the Mites (*Acarina*) and allied to the pests that infest and produce the galls and leaf blister on plants. One of the best known of these Mites is that commonly referred to as "Red Spider" (*Tetranychus telarius*), which is very common in hot houses in Europe, being especially abundant on various species of *Acalypha* plants of the same order as the "Para" rubber tree; other Mites are parasitic on animals, while the itching Mite is parasitic on man, causing the disease known as itch: the sensation which gives the name to the disease being due to the Mites burrowing in the skin.

In the particular case under note, the very young leaves fall from the plant before they are developed—in this respect the result is much the same as though the plants had been attacked by "Red Spider"—while those leaves which mature, present a crinkled appearance and are generally of a yellowish green colour, and will be found upon examination to be perforated by numerous holes, due to the punctures of the Mites when the leaves were young. Saprophytic fungi are also present, but the disease is primarily due to the depredations of these minute parasites.

Being so small, these Mites are apt to be overlooked, and the cause of the disease attributed to other causes: they can be detected by the naked eye by anyone possessed with keen eyesight, though a good lens or a microscope is indispensable to enable us to obtain a correct idea of their structure.

The particular Mite causing the disease alluded to above, is probably a species of *Tarsonymus*, but I am unable, with the literature at my disposal, to determine the species. This, however, is not of much consequence to the planter, as the cause and effect is much the same in the various members of this family. Mites are produced from eggs, and, as a rule, the young are provided with three pairs of legs: they thrive best in a warm dry atmosphere. When they occur on plants having smooth leaves, they can be kept in check by syringing with clean water, or with a solution of soft soap and quassia chips. Dusting the affected parts with tobacco dust will also be found very effective and perhaps more expedient: this should be done in the evening so as to reduce the risk of it being blown off, or washed off by heavy rain.

P. J. O.

In one particular instance where the plants were badly affected, I attributed the attack to the fact that the young seedlings had suffered from an insufficiency of water at the roots. The nurseries had been made under the shade of large trees, and the seedlings had suffered owing to the fact that during a comparatively dry spell of weather, the soil, being full of the roots of the older trees, had become too dry to support a large number of seedlings growing close together in nursery beds. Moreover the beneficial effect of heavy showers in cleansing the foliage, such as we are accustomed to in a dry season, is lost to the plants when growing under shade.

This disease is chiefly limited to plants growing under unfavourable conditions, and is not likely to affect trees when once established. I am of opinion that it may be entirely avoided by making the nursery beds in a damp locality in such a position that the seedlings will derive the full benefit of a free circulation of air and be subjected to the full effect of heavy showers from time to time. The soil should be free and well drained, but capable of retaining plenty of moisture even in comparatively dry weather: if necessary, artificial irrigation must be resorted to, but care must be exercised that this is done thoroughly as opposed to frequently, an operation which would be worse than useless in the case of small seedlings exposed to the full blaze of a tropical sun.

STANLEY ARDEN,

Superintendent Experimental Plantations.

EXPERIMENTAL PLANTATION,

BATU TIGA, SELANGOR.

4th May, 1905.

THE AGRICULTURAL SHOW AT KWALA LUMPUR, 1904.

The Report on this Show, held in Kwala Lumpur, 5th, 6th and 7th August, has just been published. As it is rather too long to publish completely in the "*Bulletin*" we extract from it such facts as are interesting specially to the general public. It was agreed on all hands that the Show was a success, and the President, Mr. D. G. CAMPBELL, attributes this to the members of the various Committees and District Officers who laboured so energetically for this end. "It cannot," he says, "be said that the Show was held as the outcome of any special interest on the part of the general public or even of the planting community, on the contrary it was held at the instigation of the Government." And it must be admitted it is true that a certain

number of those who might have been expected to have been willing to assist for the benefit of the community appeared to misunderstand the rationale of such exhibitions, which are not for the benefit of the Government but strictly for the benefit of each and every resident in the Peninsula. As to the utility of these exhibitions Mr. CAMPBELL writes as follows:—

The Utility of Agricultural Shows.—The utility of such shows has often been questioned, but no one who saw the large and varied exhibits in the “Native Industry” section, and the ready sale which these exhibits met with, can deny that a great stimulus was thereby afforded to native industries; and, so long as the natives can rely upon being able to dispose of their productions at these annual shows, there is good reason to believe that some of the Malay arts and handicrafts, which, as the Hon. Secretary for that division remarks in his report, are rapidly becoming obsolete, may, at least to some extent, be revived.

Educational Value of Shows.—The practical demonstration on the preparation of rubber given by Mr. BURGESS, Government Analyst, Singapore, was of the greatest value, and my Committee is deeply indebted to him, as also to Mr. G. DEARIE RUSSELL, Manager, Federated Engineering Company, who constructed a rubber-washing machine on the principles recommended by Weber—for an exceedingly interesting and instructive demonstration; and one which will probably have a very important bearing upon the preparation of rubber in the States.

The educational value of these shows is a point which should always be kept to the fore, and every effort should be made to bring the natives within their educative influence. It is suggested that, in addition to such demonstration as the one referred to above, prizes should be offered for agricultural implements as the result of competitive trials, not merely as exhibits in the ordinary way.

REPORT ON DIVISION “A.”—AGRICULTURAL PRODUCE.

Mr. L. C. BROWN had the charge of this department, which was really very well represented. He reports:—

As regards Division “A,” I feel every reason to be proud of the exhibits, not only from the most satisfactory—but that the exhibits themselves would, as a whole, do credit to any show as the products of tropical agriculture.

The exhibits received came from the following districts:—

Perak.—Upper and Lower Perak, Krian, New Territory, Matang, Larut and Kuala Kangsar.

Negri Sembilan.—Seremban, Jelebu, the Coast and Tampin.

Selangor.—Kuala Lumpur, Klang, Kuala Selangor and Kuala Langa.

Pahang.—Only a small exhibit of padi.

Penang, Province Wellesley and Malacca, also contributed.

A few remarks about some of the exhibits deserving, I consider, special mention, may not be out of place, the more so as it will serve for reference and comparison with any future show.

Coconuts, of which there was a magnificent collection, both specimen and variety, may be said to have taken first honours, in so much that it was in this product for a very fine collection of varieties that Mr. E. B. PRIOR, Golden Hope Estate, was awarded the cup kindly presented by H. E. the High Commissioner for the best collection of agricultural products. The same estate received a first prize for an excellent sample of copra, while the Selangor Oil Mills were equally successful for a very fine sample of poonac manufactured in their factory. The products derivable from the coconut tree and its fruit were very much in evidence, and with respect to this, one exhibitor had baskets, brushes, ladles of all sorts, sticks, and some articles of such intrinsic value that he refused to part with them at any price. Excellent samples of sugar, coir fibre and twine were also on view, and it is to be hoped that at some future show, when the industry expands in all its branches, we may see rope, soap and coconut butter exhibited from some factory situated in the Federated Malay States or the Colony.

Rubber.—I was certainly disappointed that there were not more exhibits in this class; on the other hand, most of the samples were of excellent quality. Mr. A. B. LAKE took both the cups presented for Para; Kent Estate the one given by the Selangor Planters' Association; and Uganda Estate Mr. PARRY's prize; Mr. F. A. STEPHEN's exhibit being "highly commended," as also that of Mr. P. W. PARKINSON. Mr. W. W. BAILEY succeeded in carrying off the cup presented by the Negri Sembilan Planters' Association for the best sample of rambong.

Padi.—The various kinds, both as regards specimens and collections, were exceptionally good, but great difficulty was found in obtaining competent Judges for awarding the prizes, as the Judges appointed for this division expressed themselves unwilling to undertake the work, believing that they could not give fair justice in the selection, and it would be better if, in future, some special arrangement was made about this. Mr. BELFIELD, the Acting Resident of Perak, was good enough to present a prize for the best sample of padi, and this was awarded to Penghulu Kota Lama Kiri, Kuala Kangsar.

The Judges commented most favourably on the exhibit that took first in Gambier, and they were also very much taken by the best sample in white pepper, grown on Padang Rengas Estate, Kuala Kangsar. An interesting feature of the show was an excellent display of various fibres by Messrs. HOGAN & Co., which

attracted much attention and easily gained the first prize. Exhibits of Liberian coffee, cotton, and tapioca (pearl, flake and flour) were all very good.

Special thanks are due to the Hon. J. ALLINSON, Messrs. RIDLEY and FOX, who kindly officiated as Judges, and I am particularly indebted to Mr. FOX for the valuable assistance he gave me in arranging and staging the exhibits, as also to Mr. ARDEN and Mr. J. P. SWETTENHAM for the help given me from time to time in the necessary preparations for the exhibition.

L. C. BROWN,

Hon. Secretary, Division "A."

REPORT ON DIVISION "B."—FLOWERS, FRUITS AND VEGETABLES.

Dealing with the three sections separately and commencing with that for flowers, plants, etc., the exhibits staged were poor, and had it not been for the enterprise of only about half-a-dozen exhibitors this class would have been a hopeless failure.

As it was, the value offered in first prizes amounted to \$230, while only \$60 were awarded by the Judges; and as regards second prizes, awards of the value of \$15 only were made out of a provision of \$35.

The collections sent by Lady TREACHER, Mr. D. G. CAMPBELL, Mr. CHUA KIM KIAT, Messrs. YAP THYE KEE and TEH SEOW TENG and by Mrs. AH YEOK, divided practically all the prizes between them. Mr. D. G. CAMPBELL winning six first prizes, two second prizes, and one commended exhibit, while Mr. CHUA KIM KIAT won six first prizes.

Lady TREACHER won two first prizes for her collections of ferns, and Mr. LOKE YEW's cup for the best group of Chinese plants arranged in fantastic shapes was awarded to Messrs. YAP THYE KEE and TEH SEOW TENG, Mrs. CHEOW AH YEOK winning first prizes for the best collection of flowering plants.

The only exhibit worthy of mention among the class for cut flower was the bowl of magnificent roses shown by Mr. EPHRAUMS, of Negri Sembilan.

The class for table decoration was well filled, and Miss ANDERSON, who very kindly consented to award the prizes, had some difficulty in discriminating among the six pretty tables of the ladies who competed.

The group of ferns, etc., staged by the Government Gardens, Selangor, were exceedingly effective, and as a general exhibit of flowers, fruits and vegetables, too great praise cannot be awarded to the Government Gardens, Perak, for their very representative collection staged by Mr. CAMPBELL, the Government Superintendent.

In the section for fruit, prizes to the value of \$106 (first) and \$42 (second) were offered for competition, the actual awards made by the Judges, however, only amounted to \$67 (first), \$30 (second), and \$6 (special).

Mr. STANLEY ARDEN had very kindly offered a special prize to the value of \$25 in this section for the best collection of cultivated fruit, but the Judges considered that there was not any collection of sufficient merit to warrant its being awarded.

The Land Office, Penang, won in this section five first prizes and five second, while next to theirs the best exhibits were those from the district of Jugra, which carried off three first and two second.

Mrs. MOORHOUSE won first prize in classes 31 and 32 for chutney and pickles, respectively; and Mrs. REYNE was awarded first prize in class 30, for preserved fruits.

Perhaps the most interesting class in the fruit section was No. 29 that for any variety of fruit not included in the official prize list. The first prize was awarded to Mr. W. J. COATS for his Brazilian pears, and a special prize to Mr. R. D. TOLLEMACHE for some exceptionally fine lemons.

The limes exhibited by Batu Caves and Kamuning Estates, and also the oranges grown by Mr. CHUA KIM KEAT, of Singapore, are well worthy of mention as showing what can be produced in the Straits.

The fruits exhibited purely by Malays were very poor, both in quality and quantity. The poorness in quality is due principally to the reason that the fruit season was only just beginning, but a great deal of it is attributable, as is also the paucity of exhibits, to the fact that only in the one district of Jugra did the District Officer seem to take any real interest in working up his Malays to exhibit, and having done so, in seeing that their collections were properly classified for staging.

This applies also to the section for vegetables, and until more interest is taken by the officers who are in touch with the Malays in their own homes, it will be impossible to ever get together a representative collection of what the Malays can do in the cultivation of the ordinary fruits or vegetables, for which there is the greatest demand.

As an illustration, and taking the section for fruits, prizes were offered in thirty-two separate classes, in twenty-one of which second prizes were also offered. Out of these only six firsts and six seconds were awarded to Malays of the F. M. S., and of that number again, three firsts and two seconds went to the district of Jugra alone.

To proceed to the section for vegetables. There were eighteen different classes in which first prizes to the value of \$49, and seconds to the value of \$23, were offered, the value of the prizes actually awarded being \$34 in firsts, and \$18 in seconds.

Mr. H. N. RIDLEY's special prize in this section was won by Mr. FOO WHA CHENG, of Kuala Lumpur, for his collection of vegetables, the other principal exhibitors being the Land Office, Penang, with three firsts and one second, and the Jugra District with one first and two seconds.

The most representative classes were perhaps those for brinjals, pumpkins, watermelons and kladi, and it is perhaps worthy of mention that in the classes for such ordinary vegetables as beetroot, cabbages, onions and artichokes, no exhibits were entered for competition.

Speaking generally, I do not consider that this division of the show was a very representative one. The plants and flowers are not of so much importance, perhaps, as the fruits and vegetables, and it is a matter to be regretted that the classes for them were not better filled.

H. E. BYRNE,
Hon. Secretary, Division "B."

REPORT ON DIVISION "C."—STOCK AND DAIRY PRODUCE.

Sections 1 and 2 were cancelled a week before the first day of the Show, owing to the existence of rinderpest in Kuala Lumpur. Section 1 would have had some interesting exhibits, as several Europeans in Selangor and Perak had intended to exhibit.

Section 3 only provided one exhibit in class 1. In classes 2 and 3 there were no exhibits. In the classes for goats, classes 4 and 5, there were four and six exhibits respectively. All the exhibits in these sections, except one from Klang, were from Kuala Lumpur and district, and none of them call for special notice. One prize was awarded in class 1, and two in each of classes 4 and 5.

Two extra prizes were given for sheep.

The Chinamen were backward in bring their pigs, owing to trouble of transporting them, keeping them under restraint, and feeding them on the show ground. The prizes would probably have to be increased in value to induce people to show their pigs, and I doubt whether, even if pigs were exhibited in large numbers, it would prove a great advantage or help on the purposes of the Show.

In section 4, poultry, etc., there was a large number of exhibits. Far ahead of the rest were Mr. FARRER BAYNES' light Brahma fowls. There were many kinds and varieties of fowls exhibited by natives.

In section 5 there were two exhibits of butter, both from Europeans, and several exhibits of eggs.

There were also miscellaneous exhibits which it was found impossible to class under any of the scheduled headings, such as cats, plandoks, birds of various colours and sizes, and a crocodile. These exhibits excite considerable interest among the spectators:

but it should be decided, I think, to keep within the classes scheduled and not to accept miscellaneous exhibits, and clear instructions should be issued to local secretaries on the subject.

Many of the native exhibitors appeared to imagine that deformity in an animal is a special merit, and the mere fact of an exhibit being unique in its gait or the malformation of its limbs entitles it to a prize. There was also an impression that the Judges were to make a daily circuit of the show, awarding fresh prizes on each occasion.

Thanks are due to Messrs. DYKES, R. MEIKLE, E. B. SKINNER and E. F. TOWNLEY for the work they did in arranging the exhibits, and to the two last-named and Mrs. VENNING and Mrs. EPHRAUMS for judging the exhibits. In conclusion, I would recommend that on future occasions prize winners should receive their money prizes on the last day of the Show, as far as possible. This would save a considerable amount of trouble to secretaries I think, and would be very popular among the native prize winners.

T. W. CLAYTON,

Hon. Secretary, Division "C."

REPORT ON DIVISION "E."—NATIVE INDUSTRIES AND MANUFACTURES.

The section of the Agri-Horticultural Show devoted to Native Industries and Manufactures was certainly by far the largest and probably attracted the greatest attention of any on the ground, its success being almost entirely due to the efforts made by the various District Officers in the Colony and the Federated Malay States to induce the natives to exhibit—by no means an easy matter. The total number of individual exhibits could not have been less than eight or ten thousand, though, of course, this includes series of twenty or thirty objects exhibited under one head.

As might be expected, the bulk of the prizes were carried off by exhibitors from Perak and Negri Sembilan, while a few, chiefly connected with agriculture, were won by Malacca. Selangor exhibits formed a very small proportion of the whole, and Pahang, owing to distance and difficulties of transport, was but poorly represented; nearly every specimen sent by this State, however, was awarded a prize. Special mention should be made of the magnificent exhibit of stamped cloth, *kain telepok*, and silver, from the Kuala Langat district; of the carefully executed series of model fishing boats and nets from Kuantan; of the miscellaneous exhibits of the Kuala Kangsa Art School and the Perak Vernacular Schools; and of the kris sheaths and handles from Upper Perak.

The Show was instrumental in bringing to light numerous implements, etc., now quite obsolete in the Federated Malay States, such as the *gobi api* or fire syringe; but the general impression given was that Malay arts and handicrafts are rapidly becoming obsolete (in the Western States, at any rate) with but little prospect of revival. To take only two instances, the examples of recent silver-work and wood-carving entered were both poor in execution and tasteless and debased in design, showing marked Chinese and Indian influence. Terrible ornaments made of Berlin wool of the most violent aniline shades, where the most popular exhibit in the show among the natives, and were eagerly competed for by Chinese, natives of India, and Malays alike.

H. C. ROBINSON,

Hon. Secretary, Division "E."

AGRICULTURAL SHOW FOR 1905.

This year's Agri-Horticultural Show is to be held at Penang on the 9th, 10th and 11th of August next. The Prize List has just been published, and copies can be had of the Superintendent of Gardens at Penang, or the Director of Gardens at Singapore, on application. Exhibitors wishing free transport on the railway must give notice to a District Officer or General Secretary, who will, if they approve of their exhibits, provide them with numbered tickets and a free third-class pass on the railway for themselves and their exhibits. A reduction of 25 per cent. off the usual freight will be made by the Steamship Company on all bonâ fide exhibits, other reasonable expenses connected with transport of exhibits will be considered by the Committee.

Entries in all divisions must be made in writing and reach the Secretary at least seven days before the opening day. In the case of horses and dogs three weeks.

The price of admission to the exhibition is two dollars for the opening ceremony the first day, and 20 cents every succeeding day.

Among the additional exhibits for which prizes are offered are Para rubber-seed oil and clove oil, the best collection of varieties of padi grown in any one Mukim and accompanied by an affidavit from the Penghulu that the whole collection was grown in his Mukim during the previous padi season. Para and Rambong rubber not less than 60 lbs. packed as sent from the estate.

Cups are offered as follows:—

For the best exhibit in the Agricultural Produce section by H. E. THE GOVERNOR.

For best sample of rice prepared by machinery by KIM KEK CHUAN.

Best collection of varieties of rice by Hon. A. HUTTENBACH.

Rambong, best sample, by NEGRI SEMBILAN PLANTERS' ASSOCIATION.

Para and Rambong packed for shipment by W. W. BAILEY, ESQ.

Para Rubber free from chemicals, SELANGOR PLANTERS' ASSOCIATION.

Sugar, best refined white, by LIM EOW HONG.

Cannas, 6, presented by Dr. S. KAE.

Table decoration, T. GAWTHORNE, ESQ.

Best collections of fruits, Hon. J. K. BIRCH.

Draught Bulls, pair, A. O. MERICAN.

Bull or Bullock, Peninsula, PENANG CATTLE BUTCHERS.

Buffalo, SYE AH THOON.

Champion animal in Cattle Section, Dr. LOCKE.

Boar, HOKIEN PORK BUTCHERS.

Sow, PIG MARKET DEALERS.

Sow and Litter, AH KOON.

Six pigs, ELTON BELL, ESQ.

Best Pig over 300 catties, CANTONESE PORK BUTCHERS.

Champion Pig, TEAM KEE.

Six Sheep, INDIAN MUTTON TRADING CO.

Sheep (pair), THE PIGDEALERS.

Pair of Turkeys, H. STARR, ESQ.

Best specimen of Native Work, GAN NGOH BEE.

Rubber Machinery, MEMBERS OF ENGINEERS' INSTITUTE.

Also a number of Cups for Horses and Dogs.

Penang has always shown well in cattle and poultry, and we may hope for a good display this time. The fruit crop, at least down South, promises very ill this season, but the Northern part of the Peninsula may be more productive. The remarkable success last year in the Malay arts section, and the subsequent sale of almost everything the natives brought at very good figures, ought to bring as good an exhibition at least. Flowers and ornamental plants too should be much better than at last year's show, where they were remarkably poorly staged, and we shall hope to see a really good exhibition of rubbers, not perhaps better in quality, for that shown last year at Kwala Lumpur was about as good as it could be, but in greater quantity, and more representative of this great industry.

SIR HUGH LOW.

It is with much regret that we have to chronicle the death of one who did so much for agriculture and botany as Sir HUGH Low, who died on April 18th, 1905, very nearly eighty-one years old.

He was born on May 10th, 1824, and about 1840 obtained an appointment in the Hon. East India Company and travelled out to the East with Mr. (Sir) JOHN BROOKE, which ended in his quickly resigning his Indian appointment and joining the Rajah as secretary. He remained there about three years and then

returned to England where he published a well-known work in "*Sarawak, its Inhabitants and Productions.*" In 1848 Mr. BROOKE became Acting Governor of Labuan, and HUGH LOW accompanied him and became Colonial Treasurer of the Island, whence he visited Lawas and Brunei and made the first ascent of Mt. Kinabalu in 1851, where he collected the grand species of pitcher plants, *Nepenthes Rajah*, *Lowii*, *Edwardsianus*, and *villosa*.

He ascended the same mountain again in 1858, and again added much to the knowledge of its flora. During his stay in Borneo indeed he discovered a great number of plants now well known in our Gardens, besides the pitcher plants, among other *Cypripedium Lowii*, *Vanda Lowii*, *Coelogyne pandurata*, the fine Rhododendrons of Borneo *R. Brookeanum*, *R. Lowianum*, and others. So well was he known by the natives to be an enthusiastic collector of plants, that the pretty foliage Orchids *Anoectochilus* and *Hacmaria* are known to this day by the Malays as Daun Lo, or Low's leaf.

In 1877 he became Resident of Perak after the murder of Mr. BIRCH and held the appointment till he retired in 1889. He was created C.M.G. in 1879, K.C.M.G. in 1883, and G.C.M.G. in 1889.

During his residence in Perak he maintained his interest in botany and especially in agriculture. Starting with the Kuala Kangsar Garden where he planted most of the best fruits of the country and introduced the fine naturalized Bornean lemon which is now fairly common in the State. Limau Bali, from the Island of Bali, undoubtedly the best pumoloe, was also introduced by him and is cultivated by many Malays up and down the river. Of useful timbers, Mahogany, Cedrela toona, and Teak were planted and none of economics that were then procurable but what received attention. He was the first to plant *Hevea brasiliensis* in the Native States from seeds and plants supplied by the Botanic Gardens, Singapore, and planted at Kuala Kangsar, and from there planted in many parts of the State. The oldest trees on Kamuning Estate and the large tree or two at Lady WELD's bungalow as well as those at S'tiawan were all supplied from the Kuala Kangsar trees. Some stock trees of *Ficus elastica* and *Manihot Glaziovii* were also cultivated in this garden.

Cinchona and coffee were tried at Waterloo and also at the Hermitage, and at the latter garden many excellent English vegetables were successfully grown.

The Cicely garden half way between Lady WELD's bungalow and the Hermitage was planted with tea and liberian coffee and the Gapi's Garden surrounding. Lady WELD's bungalow planted with pepper, liberian coffee and fruits.

2nd Agric Show

AGRICULTURAL BULLETIN
OF THE
STRAITS
AND
FEDERATED MALAY STATES.

No. 9.]

SEPTEMBER, 1905.

[VOL. IV.]

**THE AGRICULTURAL EXHIBITION HELD
IN PENANG.**

The second Agricultural Exhibition for the whole of the Malay Peninsula which was held at Penang this year was undoubtedly the finest display of the produce of the country both in agricultural products and in artistic work ever exhibited to the public in the Peninsula. Some Ceylon visitors were heard to ask why cannot we have Shows like this in Ceylon? Nothing approaching such an exhibition having ever been seen in the neighbouring Colony. The display indeed reflected the greatest credit on the Secretary, Committees and the numerous exhibitors and others who contributed to the success of the Show. The weather was perfect, hardly any rain falling during the three days of the Show, and the crowds of Europeans and Natives who came to see the exhibits testified to the interest taken in the produce of the country. Indeed, Penang was so crowded with visitors that many found some difficulty in finding places to stay in the town.

It was noticed that the Native exhibitors were this year more apt at the work of exhibiting their produce than on previous occasions, and seemed to understand the methods and regulations adopted for the arrangements of the different classes better than last year, thus relieving the Secretaries and others of a good deal of work.

In the Art Section which was very large, the Natives had no cause for regret that they had brought their works to Penang, for those who did not get prizes were gratified by the way in which the public bought their exhibits, and more would doubtless have been sold had not the unsold stock been repacked and carried off by the exhibitors on the last day with surprising rapidity. It would, perhaps, be worth considering if on future occasions some arrangement could be come to to have a sale-day after the Show.

The exhibition was opened at eleven o'clock on the first day by His Excellency Sir JOHN ANDERSON who had previously made a

tour of the buildings. After a speech by Mr. J. K. BIRCH, His Excellency spoke for a considerable time on the subject of the exhibition and on the progress of agriculture; his remarks being very much to the point and very well received, after which he declared the Show open. The exhibition remained open till Friday evening when the Cups which had been presented by various donors were distributed to the winners by Mr. BIRCH.

AGRICULTURAL PRODUCE.

The section for agricultural produce was the biggest and perhaps the most interesting part of the Show and both in quantity and quality exceeded all previous exhibitions. Taking the classes as they were arranged in the schedule, arrowroot was well shown, Mr. W. W. NORRIS of Singapore taking first prize and diploma for roots as he did last year and a second prize for prepared arrowroot. The second prize for roots fell to Caledonia Estate, the third to Penghulu MAT CHIE. Prepared arrowroot was represented by a number of good samples, the first prize being allotted to Mr. CHOW AH NEAN, his sample being a little finer than that of Mr. NORRIS. In this class, a sample of the roots of *Canna edulis*, *Tous les mois*, a form of arrowroot seldom cultivated, was shewn.

Betel-nuts both fresh in the husk and dried and split were extensively exhibited, over fifty samples of the latter class being entered. The prize for fresh Betel-nuts fell to Mr. C. J. WILLIAMS with a very fine bunch. Dried nuts were more difficult to judge owing to the great number shown and the excellence of the samples. The comparative values of this product are estimated not only by the size of the nut and its fully ripe condition but also by its fullness and absence of a crack or split in the centre.

There were but few entries for articles made from the Coco-nut palm, and those not very first class collections but many of such articles were to be found in the Art Section of the Show. Coco-nut oil was clearly a popular exhibit, over eighty bottles of good, bad and indifferent oil being staged.

Toddy was represented by five or six exhibits, that of Caledonia Estate being considered by the expert employed to judge, a Tamil man, as very superior.

The great Show thus of products of the Coco-nut palm illustrated the great importance of this plant to the Malay Peninsula and the excellence of the produce in all its forms.

Dragon's blood, the red resin from the shells of the fruit of *Dæmonorops* was represented by several high class specimens. ABDUL WAHAB taking the first prize with a good bright coloured sample of powder, and block with a bunch of the fruit.

Of Indigo there were several samples chiefly liquid and paste, Caledonia Estate showed a bottle of Indigo powder, dry, rather pale in colour, but considered worthy of special commendation by the judges on account of the difficulty and importance of preparing it in this form.

Fibres were poorly shewn, compared with the fine lot shewn last

year by Mr. SCHIRMER, who did not exhibit on this occasion. Chiefly noticeable was some excellent rope of *Sansevieria* fibre prepared by Mr. PRIOR. There is a future for fibre in the Malay Peninsula and we shall hope to see it better shewn at future Shows.

Some samples of *Raphia* bast prepared in the Botanic Gardens, Singapore, from the leaves of the *Raphia ruffia* palm were shewn in this section.

Cocoa pods were only represented by two lots, neither ripe and of very inferior quality and no prize was awarded.

Cloves had thirteen exhibits and were fairly good. The sample that obtained the first prize being excellent, but we remember to have seen a better Show of this spice in former exhibits in Penang.

Nutmegs were very good and a considerable number both in the husk and in the shell were shewn, and Mace was also well represented.

There were several entries for collections of spices used in curries, very nicely got up and arranged.

Ginger was not as finely shewn as we have seen, though the sample which obtained the first prize shewn by Mr. CHIN KIN GOON was by no means a bad one. The other samples were small and rather poor. The same might be said of Turmeric, the first sample, however, shewn by Mr. KANG THEAN SUNG, was exceptionally good. Perhaps the dry season at the beginning of the year may have been the cause of the poorness of the exhibits in these classes.

Pepper, both white and black, was represented by excellent examples from Gapis and Kamuning Estates and also from Sepang. In this class some excellent pepper was staged which was disqualified by the judges as it was discovered that the exhibitor was a dealer in Penang who had imported his samples from Achin.

There were one or two other cases in agricultural produce in which the exhibitor had shewn products purchased by him in the market, and unfortunately, by some oversight, the regulations did not prevent an exhibitor purchasing samples in the market and showing them as his own so long as they were grown in the Peninsula. Such a thing is hardly likely to occur except when the exhibitions are held in the large towns, Singapore and Penang, but the rules in this respect will require alteration.

Of Copra, over a hundred samples were shown, chiefly sundried, but Kiln-dried Copra was not wanting; many of the specimens were very fine.

The classes for Coco-nuts husked and unhusked, and collections of different kinds were, as at last year's Show, represented by a vast array, occupying one side of the building allotted to agricultural produce, and gave no small work to the judges to decide on which were the best. A Ceylon visitor was heard to remark that if he had

known that the Malay Peninsula could produce such nuts he would have started planting here years ago. Mr. PRIOR as usual carried off the best prizes in this section both for collection and sample. In the collections of Coco-nuts some very odd varieties appeared, such as the horned Coco-nut with its short horn-like additional carpels, and some very narrow and small fruits, and many more useful varieties.

Coco-nut Sugar was well shewn, the samples being numerous and good, and giving some trouble to the judges to decide on their respective merits. There were five or six exhibits of Nipah Sugar, and plenty of the sugar from the Kabong palm *Arenga*, most of which was very good and some very excellent. Tea was not unrepresented; Durian Tunggal estate taking first prize.

Gambir was fairly shewn, Penghulu KASAN'S Cube, and Nail gambir being a good sample.

Coffee shewed by the scantiness of the exhibits how much this product has fallen before the advance of rubber, still what was shewn was of very good quality. Mr. BAILEY carried off a prize for his hybrid *Stenophylla-liberica*, and was seconded by Mr. PRIOR, and the latter won on Liberian coffee both new and old.

Of Essential Oils there were a number of interesting kinds shewn. Mr. HARDOUIN staged a very pretty series of Patchouli, Nutmeg, Clove, Lemon-grass and Citronella. Mr. MACHADO shewed also several good and unusual oils including Calamus Oil, (*Acorus Calamus*) and Lemon Oil.

Citronella Oil was shewn also separately but not in large series.

Castor Oil had eight exhibits and was good. Sesamum Oil was also shewn, and one sample of Rubber Seed Oil very clear and bright was exhibited by Mr. COATES. Para rubber seed is too much in demand this year for planting to produce a large display of its value as an oil.

Sago Flour and Pearl Sago were not as well shewn as might have been expected, the samples being few and poor.

Tapioca roots were fairly good and some were large, and the display on the whole was about as good as usual.

Tapioca Flour and Pearl, and Flake Tapioca were well shewn and of good quality and colour.

Sugar Canes were not very extensively shewn, but it is unnecessary to say that those coming from Caledonia Estate were very fine. The variety of kinds shewn by other exhibitors was not large, but both crushing and eating canes were represented. A branched cane, not by the way a great rarity, attracted some attention. In refined Sugar, Caledonia Estate was the only exhibitor, for a very nice looking sample refined in Hongkong was promptly disqualified by the judges. Rum and Rum shrub also were only represented by samples from the great Sugar Estate, whence also came a sample bag of Molascuit, a new food for horses mostly composed of sugar, and said to be very popular with these animals.

Brown Sugar was well shewn, LEONG LAK HING of Bagan Serai getting a prize for this.

The Shows of Jungle Produce as represented by Guttas and Rubbers, and also Damars, were poor, and call for no special remarks. Rattans were well represented, a considerable number of collections being shewn. Many of those exhibited were, however, hardly trade rattans, still as collections they were good and interesting. Bamboos were well shown, ordinary kinds as well as the curious spotted bamboo, twisted ones, and some large specimens of the big *Dendrocalamus giganteus*.

Native herbs used in medicine were very much more extensively shewn than at last year's Show where there were but few entries. One competitor took a prize with a hundred and four different herbs with a catalogue of their native names and uses.

Mr. MACHADO brought from Kamuning estate some valuable drugs he had grown and prepared including Ipecacuanha, Jeringu (*Acorus calamus*) *Brucea sumatrana*. *Hydrocotyle asiatica*, dried leaves, and Papain for the latter he received a special prize.

Fodder grasses were represented by several collections, but none were particularly well selected. The exhibitors seemed to think that any grasses or sedges could be classed as fodder grasses, and some of the collections contained coarse sedges quite unsuited for fodder. Of Tuba roots a considerable number of samples were shewn, chiefly differing in thickness of root and neatness of preparation.

Patchouli was well shewn, twenty-two samples being staged, Mr. MACHADO again this year carried off first prize with fine and well dried leaves. Of Sirih leaves there were twenty-six specimens, both of the Chinese and Malay strains, nearly all were very fine large-leaved samples. The Malay who was asked to judge this difficult class, gave his verdict for the red veined form.

Indian corn was good and abundant, some fine colès being shown. There was little variety in the kinds staged, only one sample of the red corn being shown.

Cotton was chiefly and largely represented by the short stapled Javanese cotton, but Mr. LOGAN won on a fine sample of Egyptian prepared with great care, and grown in the North of Province Wellesley, Mr. MACHADO also showed Egyptian.

Kapok was very abundant, and many of the samples very good. Para rubber was naturally one of the most interesting and attractive exhibits and the collection was for the most part superb. Mr. BAILEY'S crepe and fancy rubber were highly admired. Mr. PRIOR'S crepe, and the samples shown by Mr. COATES, Mr. MACHADO and Sandy Croft estate were all of the finest qualities. The old fashioned biscuits were represented but the crepe and flat oblong sheets were more in favour, and the round biscuits seem to be almost a thing of the past. Scrap was well prepared by Mr. BAILEY and Mr. MEIKLE, and was really very good. Rambong was not wanting, Mr. PRIOR'S crepe strips being the best sample

of this rubber we have seen, Mr. BAILEY shewed excellent samples. One untoward thing occurred in the judging of the rubber classes, Mr. LAKE and PAGETS' cup for any rubber of other class than what took first prize in Para rubber, was awarded to a good sample of sheet rubber, entered in the name of a Chinaman, who it proved later was merely a buyer and not a cultivator. In cases like this the prize should really belong to the grower and preparer of the rubber and not the mere agent, who has no claim to it.

A prize offered for improved rubber machinery was awarded to an improved roller for making sheet rubber. It is needless to say that both in quantity and quality the exhibition of rubber was an immense improvement on the display of last year's Show, and was an exhibition of which the planters might well be proud.

FLOWERS AND PLANTS.

The exhibition of horticulture was by no means what it has been at previous Shows, and was little if at all better than that of last year's Show at Kwala Lumpur, a very large number of the classes in the schedule were not at all represented. The flowers were scanty and on the whole poor, the foliage plants not up to standard, why this should be one cannot say, but one cannot help feeling that we have not now-a-days the horticulturists of some years back. In a country where so many fine and beautiful plants can be easily grown, it is regrettable to see so poor a Show staged.

A fine *Grammatophyllum speciosum* with eight flower spikes shewn by Mr. A. OECHALE was very attractive. The Cantonese Club showed a fine series of cock's combs and of asters, but beside this there was practically nothing in the way of flowering plants to look at. The Botanic Gardens of Penang shewed some fine Cattleyas and other orchids, and the beautiful white, red and pink Tobaccos, *Nicotiana Sanderiana* and *affinis* and a number of pinks which brightened up the exhibition considerably of foliage-plants. Mr. JOHN BROWN shewed a good group of aroids and Mr. MACHADO brought from Kamuning a very fine pot of white Caladium; Mrs. LOGAN took a prize with a large Asparagus plant. Palms were somewhat better shewn, KOW JO TOK took the first prize for six palms, well grown but common kinds, Mr. MACHADO showed some of the rarer nature palms from the Kamuning woods, including both forms of new *Pinanga acaulis* and *Iguanua Wallichii*, and took the first prize for specimen palm with a well grown *Licuala grandis*.

Mr. TAN TIN BEE shewed a nice little lot of palms also including the gem of the whole of the foliage plants, a perfect specimen of the beautiful and rare *Licuala orbicularis* from Borneo.

Two lots of the Chinese grotesque plants were shown, both good of their kind.

Mrs. J. BROWN shewed a fairly good group of various plants.

A few medium Crotons, a poor lot of Begonias, some mediocre ferns and Selaginellas made up the rest of this part of the exhibition. The cut and arranged flowers were scanty, the roses were fairly

good, those of Kamuning being very good for low country cultivation. There were several entries for table decoration, Mrs. FOX securing the first prize for a pretty arrangement of roses, a table decorated with pink and white Honolulu creeper was the next best arrangement.

VEGETABLES.

In the classes for vegetables there were some fairly good exhibits but the attraction in this part of the Show was the superb series of vegetables from the Perak Hills Gardens shown by Mr. CAMPBELL. Here on a circular table were shown peas, carrots of two varieties, very large, excellent cabbages, potatoes of unusual size for even our hill stations, excellent beet root, tomatoes, leeks, radishes, vegetable marrows, two varieties, turnips, kohlrabi, celery (exceptionally large) artichokes, chocho, parsley, mint and several other vegetables. Undoubtedly the finest exhibition of European vegetables ever seen in the Peninsula.

With these were staged some good Cocoa-pods, and some thin sheets of Ceara rubber (very clean and good) Castilloa, Rambong, and Para rubber. The whole display reflected the greatest credit on Mr. CAMPBELL. Of the vegetables shown for competition the first prize for collection of vegetables was won by a very poor lot, Cucumbers were fairly good, and so were beans of different kinds, the rest of the vegetables were very ordinary.

FRUIT.

The fruit classes were better on the whole and contained some very good exhibits, but it was difficult to see on what grounds the judges awarded their decisions, as in the cases of durians, pine-apples, papayas and pumeloes, the fruits were not even opened, so that flavour and condition seemed to be eliminated in deciding the comparative value of the fruits. In the case of any fruit not specially classed a prize was given to some fruits supposed to be lemons, and by some thought to be oranges, but which were really one of the citrons of inferior quality. The most noticeable fruits in this class were some good avocado pears shown by Mr. COATES, and some good pomegranates shewn by Mr. KHEW KHOOI of Balik Pulau, but neither of these exhibits obtained any mark of commendation.

But few Rambutans were shown, although the crop seemed to be very fine in Penang this year, but the samples were fairly good, and the Pulasans better, Tampunet, (*Artocarpus rigida*) a fruit less well known to the European than it should be was well shown. A good number of pines were shown, chiefly Mauritius pines, of which the sample which received the first prize was hardly in condition. There were two samples of black West Indian, one of which large but overripe obtained a first prize, the second in better condition, were smaller. A second prize was won by some field pines, (of the Red Ripley style) large but of no particular merit. A special prize was awarded to a tall-stemmed pine with a small and almost rotten fruit. Perhaps the most interesting pine shewn was the Pernambuco (*Abacaxi*) of which three fruits hardly ripe, how-

ever, were shown by Mr. COATES. This white fleshed pine is perhaps the finest eating pine in the world.

Of other fruits especially noticeable were some very fine Binjai of great size, which well deserved the prize they obtained. The Guavas were also good and there were ten exhibits of Dukus.

Bachangs, Champedaks, Watermelons (as far as one could judge from unopened fruits) were all good, and the Chikus (Sapodillas) were of good size but not ripe. The Pumeloes were good in point of size. The Durians it was impossible to form an opinion on as none were opened. Oranges were only represented by two exhibits, one sent by Mr. KIM KEAT of Singapore was deservedly given a first prize. Mangosteens considering the poor season were well up to standard. Of Papayas hardly any but the very large green kind were shown. These though highly suitable for extracting papain, are usually very inferior as fruit to the smaller orange variety, which was only represented by one or two fruits. Bananas were plentiful but most were overripe, some of the bunches however were in good condition and of good strains. The prize for the collection of fruit was won by Mr. LOGAN with a good and well arranged set in excellent condition. On the whole, considering that the fruit season has been a bad one this year in most places, the display of fruit was good, and very superior so the show of vegetables.

ART.

The Art Section of the Show was even better than that of last year and was indeed overcrowded. Among the exhibits which had a botanical interest were some hats of the style of Panama hats made by the Sakais under the direction of Mr. CERRUTI. These hats which were soft and flexible and of good form and texture were made of strips of Banana fibre. Mr. CERRUTI at first attempted to cultivate the Panama hat-plant (*Carludovica palmata*) for this purpose and plants were sent from the Singapore Botanic Gardens, but this plant is of slow growth, at least in this country, and so he taught the Sakais to use the cultivated Banana instead. Only some half dozen hats were exhibited, but they were so highly appreciated by the public that any number could probably be disposed of. Mr. CERRUTI may be congratulated on his inducing the Sakais into manufactures of useful articles for which there is some demand.

STOCK.

The exhibition of stock was by no means as good as might have been expected, or indeed as was shewn at the Show held at Penang some years ago.

Cattle were hardly shown at all. Mr. DOUGLAS won a prize however with a small but nice looking Australian bull, as champion animal in the Cattle section. Local bred and Indian Cattle were poorly represented. Buffalos were represented by a couple of bulls of no great merit.

Pigs were better shown, there were some very good sows on view. The champion animal being an enormous and very sulky brute,

weighing 480 catties ($5\frac{1}{2}$ cwt). There were a good number of litters of pigs also. Goats were few and not very good. Sheep had all classes filled, the first prize Ewe sheep being exceptionally fine, the other exhibits were fair.

POULTRY.

The exhibition of poultry was very good, and far in advance of last year's Show. Mr. H. WOOL won the prize for the champion with a grand pair of fowl. Two pens of Buff Cochins were highly admired and there was a good show of Bantams, Malay fowl, Silkies, and other breeds. Guinea fowl were not as good as last year, only one entry of a pair of good white birds being made. Muscovy ducks and Manila ducks were well shown, and the Geese were fine and in good condition.

The Pigeons, Antwerps and Fantails were very good, but there ought to have been more entries.

Of Cage-birds a number of different kinds were shown, Nicobar Pigeons, Pergam (*Carpophaga*), Hornbill, Parakeets, Crested Partridges, Avadabats and other birds.

Rabbits, at one time a feature of Penang Shows, were not exhibited. Two lots of Guinea Pigs however created much interest among the Natives.

PRODUCE.

The Butter which was rather extensively shown was very good, and there were many entries for Eggs, both of fowls and ducks, and some of the samples were exceptionally good.

THE GOVERNOR'S CUP.

For the best general exhibit in Agricultural produce was carried off by Caledonia Estate, Kamuning coming second. This cup was judged for by a system of marks for first, second and third prizes, and for exhibits which did not take prizes but were worthy of being shown, Mr. MACHADO of Kamuning Estate won a cup given for the best general exhibit of the Show, shewing Para Rubber, Coconuts, Ginger, Oils, Papain and other drugs, Pepper black and white, Patchouli, Arrowroot, Betelnuts, Kapok, Coffee, Fibre, Citronella Oil, Coconut Oil, Sirih, Tapioca roots, Tea, Tuba, Turmeric, Chilis, Limes, Roses, Palms, Fowls, two breeds, Eggs, Caladiums, not a bad exhibition for a comparatively small estate. Caledonia estate showed Betelnuts, Arrowroot, Indigo, Rum, Rum shrub, Sugar-cane, Sugar, Patchouli, Cotton, Kapok, Coffee, Oil, Coconuts, Tapioca, Toddy and Rubber. Mr. PRIOR though showing less in variety did very well with his fine lot of produce, taking three prizes for Coconuts, one for Copra, two for Coffee, two for Rubber and a highly commended Fibre, which was about all he showed.

NEXT YEAR'S EXHIBITION.

At the suggestion of His Excellency the Governor the exhibition in 1906 will be held at Singapore about the end of July or beginning of August, and we shall hope to have as successful an exhibition as the last.

PRIZES AWARDED AT THE PENANG AGRICULTURAL SHOW 1905.

RULES AND REGULATIONS RELATING TO EXHIBITS.

1. All exhibits must be the *bonâ fide* property of the exhibitor.
2. Competition for prizes shall be open only to exhibitors resident in the Colony of the Straits Settlements or the States of the Malay Peninsula.
3. Competition in Divisions A. B. and E. shall be confined to exhibits grown or manufactured in the Colony of the Straits Settlements, or the States of the Malay Peninsula.
4. The Committee will appoint judges, from whose decision there shall be no appeal.
5. The judges withhold a prize when they are of opinion that there is not sufficient merit to justify an award, and may award special prizes for any exhibit not contained in the schedule.
6. No Exhibitor shall be awarded two prizes in any one class.
7. The arrangement of the exhibits shall be subject to the directions of the Committee.
8. The Committee reserves to itself the right to refuse any entries that it may think fit to reject, and to cancel any class at any time before the 9th August 1906.
9. Exhibitors desiring free transport by Railway, must give notice to a District Officer, or the General Secretary, who if the exhibits are approved, will provide them with numbered tickets and a free 3rd class pass on the Railway for themselves and their exhibits. A reduction of 25 per cent off the usual freight will be made by the Straits Steam Ship Co. on all *bonâ fide* exhibits. Other reasonable expenses in connection with transport of exhibits will be considered by the Committee.
10. All entries must be in writing, and must reach the General Secretary at least 7 days, in the case of Horses and Dogs 3 weeks. before the first day of show.

No exhibit in Divisions A. C. E. and F. will be received later than 6 p. m. on the 15th August 1906.

Exhibits in Divisions B. and D. will be received up to 8 a. m. on the 16th August 1906.
11. Entries for Horses under Classes 252, to 260 must be accompanied by a certificate of height from any Sporting, Turf or Polo Club in the Colony or F. M. S. or from a qualified Veterinary Surgeon.
12. Exhibitors in Division C. and D. must provide for the care and maintenance of their own exhibits.
13. No exhibit (except live animals) may be removed from the ground before the close of the Show. Exhibitors will be provided with a card which must be produced at the close of the Show before they can be allowed to remove their exhibits.
14. The Committee is empowered to exclude, or remove, any animal which in its opinion is not in a fit state for exhibition.
15. Exhibitors in Division C. and D. will only be permitted to remove their animals from the Show Ground on obtaining an order of removal from the General Secretary or the Hon. Secretaries of these Divisions.

16. All reasonable care will be taken to provide for the safety and careful preservation of exhibits of every kind sent to the Show but it must be clearly understood that the Committee does not hold itself responsible for the loss of, or the damage to, any exhibit either in transit or during exhibition. Provision will be made for keeping small articles of value under lock and key at night.

17. Space will be provided for tradesmen and others wishing to exhibit articles for sale but not for competition. The sale price must be clearly specified.

18. Government exhibits shall not be eligible for prizes in any class.

19. Winners of prizes of \$10 and upwards, may have a silver medal if they prefer it to money.

THE AGRI-HORTICULTURAL EXHIBITION, 1906.

The third of the Agri-Horticultural exhibitions of the Colony and Federated Malay States was held at Singapore on August the 16th, 17th and 18th, on the reclamation ground in front of the Raffles Hotel. The weather proved fine for the greater part of the time but a heavy shower during the second day caused the ground to become for a time very muddy and wet. This, however, interfered but little with the enjoyment of the general public whose interest in the exhibition was attested by the great crowds which thronged to the entrance on all the three days, giving the working committee no small labour in taking the tickets and giving change. Two ticket offices were opened but these were insufficient for the purpose. A large number of subscribers and exhibitors and their assistants had free tickets but besides these no less than \$5,300 were taken at the gates, so that upwards of 50,000 people visited the show grounds. On the previous occasions two exhibitions at Kuala Lumpur and Penang the gate money amounted respectively to \$300 and \$622.20. The price of admission to the opening ceremony was \$2 and on all other occasions 25 cents a head. On the second day the school-children were admitted free and added not a little to the crowd of visitors.

Programmes of events were sold at ten cents each and were readily bought. In spite of the vast crowd which attended the exhibition there was no disorder or trouble of any kind; and there were no thefts of any importance. The few losses which did occur of articles in the exhibition were mainly due to the carelessness of exhibitors, who sometimes delayed for days after the exhibition was over to claim their exhibits.

Buildings.—The general arrangement of the buildings was designed by a committee consisting of Mr. R. A. J. Bidwell, Mr. Down and Mr. Buckley.

The plan and form of the various buildings was designed and executed by Mr. R. A. J. Bidwell, to whose untiring energy the success of the exhibition was largely due. The plan was very superior and in many ways much more convenient than that of previous shows, and the whole building was on a much more extensive scale. The Agricultural produce and native industries were housed in a long shed of poles and attap roofing, 450 feet long and 50 feet wide, half devoted to each division.

The house for plants and vegetables, 225 feet long and 50 feet wide with two projecting wings of 50 square feet. The house for cut flowers and vegetables was 100 feet long by 50 wide.

The poultry was housed in a separate shed, 75 feet long by 50 wide.

The dogs occupied a space of 125 feet by 50. Besides these a very large area was occupied by the buildings of the different firms, refreshment rooms, lavatories, Secretary's office, a grand stand by the show ring, stalls for horses, and sheds for the cattle. The whole of the ground occupied was 1,400 feet in length and 300 feet broad, or 14,000 square yards in area.

Management.

The Committee for the show was a very large one, but the whole work of the show really devolved on a very small number of workers. Fortunately they had the assistance of a number of the visitors from the Native States, who materially assisted in the arrangement and judging of the exhibits.

The buildings were planned and executed by Mr. R. A. J. Bidwell and were far the best both in design and plan of any at previous shows, and very much more extensive. The general arrangements for the exhibition were effected by Mr. Bidwell, Mr. Diepenheim, the Hon. Secretary and Mr. J. S. Isaac (Clerk of the Gardens Department) assisted after the opening of the exhibition by Messrs. Marriott, Hall, Edlin, Hilton and Buckley.

The arrangement and judging of exhibits were as follows:—Agricultural Section:—Mr. L. Brown, A. J. C. Hart, D. W. Lovell, F. H. Darke, Hon. Sec., Mr. W. Diepenheim, Mr. E. Bramall. Fruits, flowers and vegetables:—Mr. Down, Dr. Ellis, Mr. Pereira, Mr. Campbell, Mr. Main, Mr. Chua Kim Keat. Rubber:—Mr. Zacharias.

Native Industries:—Messrs. Collinge, Wray, Simmons, Chevallier, C. M. Phillips, W. S. Coutts, E. F. H. Edlin. Cattle:—Mr. Falshaw, Mr. H. A. Crane. Poultry:—Mr. W. L. Hawtrey, Mr. C. L. van Cuylenburg.

Horses:—Mr. Gaunt, Mr. Sugden, Payne-Gallwey, J. B. Young, F. Hilton, J. D. Saunders, Major-General Inigo Jones, Colonel Pennefather.

Dogs:—Messrs J. D. Saunders, K. A. Stevens, Capt. Hon. C. Baring, F. Hilton and P. S. Turnbull.

The thanks of the Committee are due to the Government of the F. M. S. who were good enough to carry exhibits free and exhibitors over their railways and to the Manager of the Singapore Railway who did the same. The Straits Steamship Company also gave a rebate of 25 per cent. of the freight of exhibits and the native visitors had also the use of the "Sea Belle" to come and return from Malacca and Penang.

The number of native visitors from the Native States was about 750, and there was some difficulty in housing them at first. The only available building in Singapore large enough for them was the new Tan Tock Seng Hospital ward, but this was so far away from town as to be practically inaccessible to them, and eventually they were housed in various parts of the town, their expenses being paid out of the exhibition funds.

There were also visitors from Ceylon, Burmah, India and two delegates from the Botanic Gardens of Buitenzorg and many others from the Dutch Colonies.

Exhibitors.

The whole of the Federated Malay States and the different parts of the Colony sent exhibits to the show, viz., Singapore, Malacca, Penang, Province Wellesley, Johore, Muar, Pahang,

Negri Sembilan, Selangor and Perak. The Siamese States in the north of the Peninsula were however not represented. Of these Perak came first in competition winning 133 prizes of the value of 837 dollars and besides carrying off the Governor's Cup. It is to the credit of this State too that nearly every exhibitor succeeded in securing a prize, showing a careful selection in what was to be sent, by the district officers. Eighty of the prizes were taken by Malays and twenty-one schools also carried off prizes, only seven of the prize winners in this State were Europeans. This in itself shows that the exhibitions are well considered by the natives and that they take a great interest in the competitions. The total number of exhibitors from Perak was three hundred and sixty-four. The exhibits from the Native States would have probably been poor were it not for the energy and perseverance of the various district officers and other officials of the Federated Malay States also. Singapore came next to Perak both in number of exhibitors and in the prizes taken. In this calculation horses and dogs naturally were more easy to show at the seat of the exhibition than from elsewhere, are excluded or Singapore would be first. The small amount of cultivation of agricultural produce in Singapore as might be expected lowered its average, though it had some advantages in the horticultural section. There were 252 exhibitors, the greater part of whom were Europeans, and 124 prizes fell to them valued at 647 dollars.

Penang comes next with 75 prizes but only 106 exhibitors, of whom the greater number were natives.

Then Malacca with 131 exhibitors and 49 prizes almost all of whom were Malays.

Selangor sent eighty-nine exhibitors only who obtained 39 prizes of the value of 173 dollars.

Negri Sembilan had a hundred exhibitors but these only obtained nine prizes of the aggregate value of 56 dollars.

Johore sent exhibits from thirty-one exhibitors, all Malays, who carried off twelve prizes valued at 49 dollars.

Pahang which is in the worst position of any State for sending exhibits had sent three exhibitors of whom one scored a first prize for wild guttas.

The total number of exhibitors was 1,006. This was a smaller number than that of Penang on the previous year, but the fact that while Penang is well supplied with rail to most parts of the Peninsula, exhibits for Singapore had to come by sea, which was inconvenient and no doubt deterred many exhibitors from sending.

OPENING CEREMONY.

The Exhibition was visited by His Excellency Sir John Anderson in the early morning when he made a tour of inspection of the various exhibits, and at 11 a.m. of August 16th he on being requested by the Hon. Captain Young, the Colonial Secretary, President of the Exhibition, formally declared the Exhibition open in a speech which we herewith give:—

SPEECH BY H. E. THE GOVERNOR.

His Excellency the Governor, Sir John Anderson, K.C.M.G., said that this was the third time he had been called upon to receive the great privilege of performing the opening ceremony at functions similar to this one. Two years ago he opened the first of these Shows, and he was sure all those who were at Kuala Lumpur then would remember with satisfaction what an excellent Show it was. Last year he had the privilege of opening the Show at Penang, and every one who saw that one must admit that Penang made an immense advance on the first one. That day they had the third. This Show had now come to be regarded as an annual exhibition and it had now been fairly established as such. He was sure that those who had been privileged to see the produces of the two previous Shows would admit that in every way this the third one was a distinct advance on the others, not only as regards the extent and variety of the exhibits, but also as to the organisation and accommodation provided for those who came to profit by what they could see and learn there. To those who originated these Shows it must be very gratifying to find they are fulfilling such useful purposes and, their being organised, managed and run as they were by practical men, was proof enough, if proof were needed, that they were practical in character. To all of them who were so to speak outsiders and belonged to the general public, these Shows had the interesting feature of being so to speak annual stocktaking times when they saw and heard of the progress which had been made during the year in the agricultural development of the country, and they could also see what kinds of products they had here, thanks to the kindness and enterprise of the merchants of Singapore and elsewhere. If they would make a tour of the ground they would see that there was little that humanity wanted here below which could not be procured in the Malay Peninsula.

The great point about these Shows was the chances they offered to agriculture and to those engaged in work in connection with agriculture. Here they saw the practical results which had been attained by those who were lessons of future success. They add to the development of the Peninsula. They were able to come here to compare notes, to see where each of them had succeeded or failed, and to profit by the success and failure of others. They would see what had been already achieved and learn how it had been achieved. In agriculture and indeed in every branch of life, the battle was not always to the strong, nor the race to the swift, but to him who was ready to learn from success and failure the lesson of future success. They had to remember that it was not only a useful education to those engaged in agriculture, but this Show furnished also a most valuable stimulus to those, who when they saw other people's products better than theirs, were moved to go back and better their own achievements; it was a stimulus to them to resolve to do better next year and so the whole community reaped the great advantage of a continued and growing chain of increased effort and renewed intelligence in agricultural working.

To the Government it was particularly interesting to see these exhibitions because he thought they must all recognize that they

marked periods of advancement in the development of the community. Hitherto most of the world outside and even those of themselves had been content to regard this as a land where they depended on the rich natural harvest of the earth which they gather without cultivation. He did not think hitherto in the eyes of the world or the merchants of the world that the products of the earth had bulked very largely in an estimate of the wealth of the Malay Peninsula, and whilst the natural harvest of tin, and jungle produce was still very rich and plentiful, it was very gratifying and interesting to find that while that was so, and appeared likely to be so for a long time, our planters were turning themselves with energy and resolution to the permanent cultivation of the soil. So long as we were entirely dependent on the natural harvest of the earth, we could never expect to have any really permanent and abiding community in this part of the world, and he was sure that when they found they were beginning to take themselves seriously as an agricultural community, they should find the world beginning to look to them as a field of some of its most valuable products. They could feel then they were laying the foundations of a legitimate stability of a trade from which Penang and Singapore, the gates of the Peninsula, must reap a great share. When they were privileged to go round this Show they would find much to interest them, and much to profit by. They would see the results of the methods of the European planter, which had been brought to the highest state of perfection possible at present, and they well know the high value put upon the products of that work in Europe.

But they would see something if possible more interesting, the results of those native cultivations which had been going on from time immemorial; these included not only the exhibits of paddy and other crops, but also models of the implements used in producing those crops. And they would also see numerous specimens of every interesting native art and craft. It had always been a matter of great regret that these native arts and crafts were to such an extent a matter of history, and in spite of efforts made by some energetic officers in different parts of the Peninsula, they were still far from being in a healthy condition. He hoped the result of this and previous exhibitions would be to give a great impetus in that direction. When the native artisan discovered there was a really good and profitable market for what he produces it would do much to encourage the production of those beautiful specimens of Malay silver and weaving, which were now too much things of the past. He thought in that way the people of Singapore could do much to encourage those officers who had been so unselfishly trying to develop these arts. And if it resulted in giving such a stimulus and revival, those officers would feel that they have reaped a very rich reward. The people of Singapore would recognize the debt they owed to the splendid work which has produced the result before them, and the generous co-operation which had been offered to them in the matter not only by the sister Settlements, but by the F. M. S. also. They had here he believed something like 350 Penghulus who had come in charge of various exhibits, some of them from very long distances right away on the northern borders of Perak, and it would be a great stimulus

and advantage to them to come into contact with European civilisation in one of its busy marts such as Singapore is.

He thought the visit of these men spoke volumes for the excellent relations between Europeans and the Natives over whom they are placed. And it was very gratifying to Government to see these rulers so sympathetic. Our rule here did not rest upon force, but entirely on the good will of those over whom we were placed, and the fact that he had just alluded to prove that the good will was founded on a rule of sympathy and appreciation on the part of the European officers, who were placed in the various districts of the Peninsula. He was sure that the people of Singapore would recognize what they owed to these people. He was sorry that his friend the Sultan of Johore was not present that day. He had taken very great interest in the Show and had given a large subscription and he was sorry that he was not able to be with them that day.

Having already been round the Show he was amazed at the wonderful organization and extraordinary amount of work, both mental and physical, which it must have involved for the members of the various Committees, who had so generously and disinterestedly taken the matter in hand. When they went round they would see for themselves the extraordinary extent and variety of the exhibits, and the admirable manner in which they were displayed, and they would he thought agree with him that the best thanks of the community were due to those who had worked so wonderfully in the collecting and placing of the exhibits. To the building committee their special thanks were due not only for the admirable arrangements made, but also for the great success achieved in so short a time. And their heartiest congratulations were due to Mr. Bidwell and Mr. Buckley, for their splendid services, and in a hardly less degree to the members of the other Committees. He had much pleasure in declaring the Show open. (Applause).

The exhibition was then opened to the public, closing at 6 p.m. In the afternoon the hack gharries, harness horses over 14.2, and hacks under 14.2 were judged. The Sherwood Foresters and Town bands performed.

On the 17th, a public holiday, the exhibition was opened from 8 a.m. to 6 p.m., and the schools visited the show ground from 2 p.m. to 4 p.m. In the afternoon the polo ponies, hacks over 14.2, harness ponies and lady's hacks were judged. On the 18th the exhibition was opened as before and in the afternoon there was a dog-show from 2 p.m. to 6 p.m. and driving and jumping competitions in the ring from 3 p.m. to 5-15 p.m. At 5 o'clock Miss Anderson awarded the prize cups to the various winners and the Show closed at 6 p.m.

It was proposed at first to continue to keep the exhibition open for two days more, but as the native visitors had to leave on Sunday afternoon and Monday it was found advisable to close the exhibition as had previously been arranged.

The band of the Sherwood Foresters and the Town band performed during the afternoons, and the former at the opening ceremony.

AGRICULTURAL SECTION.

The exhibits of agricultural produce were contained in one half of a long building the other half of which was devoted to native industries. It had been agreed previously to allow competition from any part of the Peninsula from the Isthmus of K'ra to Singapore. Few exhibits however were received from the northern States but all the others including for the first time Johore were well represented. Exhibits of considerable interest not for competition were also shown from Java and Borneo, among them was conspicuous a large series of damars, sugar, tea, oils, sago, nutmeg-butter, spices from Java and the Moluccas exhibited by Mr. Diepenheim.

The whole exhibit of agricultural produce was little if at all inferior to that shown in Penang last year, but it must be remembered that the greater distance of Singapore from the main agricultural districts would to a certain extent curtail the amount of produce brought down by rail and boat.

All classes of agricultural produce were shown excepting clove oil and boiled rice.

The judges in this section were Mr. Diepenheim, Mr. L. Brown, Mr. Hart, Mr. Bramall, Mr. Darke, Mr. Zacharias, Mr. Scouler, Mr. Lovell and the Hon. Secretary, while several native penghulus assisted in judging in the classes of articles of native consumption.

Arrowroot.—The prize for the best roots was taken for the third successive show by Mr. H. H. Norris, whose sample would be hard to beat. The whole of the specimens in this class were good.

Prepared arrow-root was also first class. There being several samples of high merit.

Tous-les-mois.—The rhizomes of *Canna edulis* were shown under arrowroot. One sample was shown last year in Penang and this time two were staged, one of which was exceptionally good and obtained a special prize. This kind of arrowroot is popular with the Javanese and its cultivation might well be developed.

Betel nuts.—Fresh betel nuts were well shown, and there were some fine clusters. A fine bunch of the popular variety known as Pinang Wangi carried off the first prize. Hardly as many were shown this year as last year and the same applies to dry and split betel nuts of which however there were some fairly good and superior samples. Specimens of the large red betel nut known as Pinang Penawar (*Actinorrhytis Calapparia*) were shown. The Malays attach however little value to this fruit, it being chiefly used in medicine and magic.

Sirih leaves.—Were fairly represented with both Chinese and Malay varieties, chiefly the latter which is more popular. The samples were pronounced very good by the Malay connoisseurs who aided in judging them.

Medicinal plants.—The class for the collection of medicinal herbs was very extensive, the largest ever shown. There were forty

collections some containing over two hundred different herbs and drugs. Mr. Machado carried off the first prize for these with a beautifully prepared series showing the specimens dried as for a herbarium, as well as dried as the drug, and put up in bottles.

Fibres.—This class of produce was better shown and staged than on previous occasions, though there was nothing equal to the collection shown by Mr. Schirmer in the Kuala Lumpur show. There were twenty-two exhibits, Mr. Machado winning a first prize with a fine set of samples, very well shown. There is doubtless a future for fibre in the Malay Peninsula. Many grow extremely readily, and there is a constant demand for high class and even second grade fibres in the European markets.

Cotton.—Some samples of this were decidedly good, but much was very poor. Mr. Machado's Egyptian was very fine. A good deal of that shown by natives was ill-cleaned, and one or two tempting looking baskets were discovered to have a fine sample at the top with very inferior specimens below.

Kapok was largely represented, and most of the samples good, some being very superior.

Cocoa pods.—Were much more largely represented this year than on previous occasions, and some samples were very fair and clean, mostly of the red varieties Sangue Toro, and Forastero. The green and yellow varieties do not seem popular. None of the pods were of very large size, and none were fully ripe, still signs of an increase in the cultivation of this product are very welcome.

Dragon's blood was well represented, and the winner of the first prize exhibited a complete series of specimens illustrating the history and manufacture of this product in the form of a living plant of the rattan *Dæmonorops propinqua* which produces the drug, a portion of an adult stem with panicles and fruit, the little mat basket and tripod, with the cockleshells used in separating the resin from the fruit, a bottle of the powdered resin of first class quality and a cake of the pressed dragon's blood as exported. All the samples shown this time seemed to be derived from *D. propinqua* though at previous exhibitions dragon's blood of other species was shown.

Coconuts.—Mr. Lawrence Brown, the Government Inspector of Coconut Trees in the Malay States, acted as judge of coconuts as well as other agricultural produce, and writes: "As at the two previous shows there were a great many fine exhibits of coconuts and all the classes were not only well filled but well represented. The best collection of varieties of coconuts consisting of no less than thirty-one kinds was that of Hadji Mohamed Yassin of S'tiawan and received the first prize, and Mr. Prior of Golden Hope Estate, Klang, easily obtained the second prize with an excellent exhibit of twenty-two varieties, while another collection of fourteen varieties staged by Latip bin Eusope of Malacca carried the third prize.

"The husked coconuts were plentiful in numbers and of good selection. The first prize was taken by Penghulu H. Aminudin of Sungei Tinggi, Perak, with a most excellent exhibit, but the judges found it exceedingly difficult to fix upon the second and third in order of merit, there being so many of a very fine standard.

"In unhusked coconuts of which there was an equally large collection the same difficulty arose, and although there was no disputing the superiority of the sample that carried off the first prize the difference between some of the others was very little, though there was no reason to grumble at the final decision."

Mr. Brown brought with him from Pahang, Temai Ulu, a fine young coconut with three strong shoots from one nut and some specimens of the variety known as "Kelapa Dadeh" an uncommon tree. The peculiarity of this nut is that when thoroughly ripe and well shaken up before being opened, it will be found that the whole of the "milk" becomes consolidated and forms as it were a second thick layer of "meat" which if eaten fresh is not only very easily digestible but very pleasant to the palate.

Copra.—The samples both of sun-dried and kiln-dried copra were excellent, except that none of them appeared to be sufficiently dry. This however might be accidental in samples coming loose from a long distance by sea.

Oils.—These were as usual a large feature in the exhibition, and there was a very extensive series, most prominent and attractive was the collection of *Essential Oils* from Kamuning Estate, which were not only magnificent samples, but beautifully staged in ornamental bottles on a polished wood and glass frame. Mr. Machado showed samples of oil of calamus, citronella, patchouli, lemon-grass, lemon, and nutmeg, easily winning the first prize.

Katz Brothers staged a nice little lot of citronella and patchouli of high quality from Tampinis Estate.

Coconut oil.—Was as usual represented by a vast array of bottles of very varied values.

Castor oil.—Was somewhat scanty in samples, but good of its kind.

A number of samples of medicinal oils and mixed oils, and other preparations highly esteemed by the Malays as medicaments were shown.

In Mr. Diepenheim's collection from Java and the Moluccas were some excellent samples of pea-nut oil, citronella and kajeput oil, which were very attractive.

Oil-cake.—Was better than usual and some first class samples were shown.

Illipe butter.—Made by the Singapore Oil Mills was shown also, an excellent sample of this valued preparation.

A sample of *Nutmeg-butter* which has never been seen at these exhibitions previously was shown in his collection of specimens.

from the Dutch Indies by Mr. Diepenheim. It is used in medicine, and was formerly at least a manufacture of Penang.

Tea.—Was represented by six exhibits, the well-known product of Durian Tungul Estate carrying off the first prize.

Coffee.—Although the cultivation has of late years almost disappeared from the Peninsula, or more correctly diminished to a very great extent, was better represented than in Penang last year. Golden Hope Estate as on previous occasions holding the front rank with its Liberian. Bailey's *Stenophylla* hybrid was represented by two or more good samples. Should coffee come back again to the Peninsula some time, as we may hope it may, we shall look for a great future for this superb variety.

Sugar-canes.—Were fairly well shown, there being in all fifteen exhibits of specimens and collections, some of these were excellent. With the decadence of the sugar industry nowadays, and the distance which Singapore is from the sugar cane district, it is not to be wondered that eating canes predominated in the collection.

Prepared sugars.—Were abundant especially those of coconut and kabong palms. These popular and nutritious sweetmeats were of excellent quality in many samples and gave the judges some trouble to decide on their respective merits. Nipah sugar, never largely represented, was hardly shown at all. Its softness and treacly stickiness make it less popular than the firm dark toffee-like coconut and kabong sugars. Native cane sugar was also good and well made and brown, white, and refined though not largely shown were of good quality.

Toddy.—Was illustrated by several samples and was as usual judged by Tamils for no European can appreciate the flavour of this native spirit.

Rum and *Rum Shrub* were shown in a very small series, but the samples were mostly good, and required some care in judging.

Honey.—For the first time at any show in the Peninsula, cultivated honey was shown by Father Gex of the Mission Étrangères, who may well be called the pioneer of apiculture here. He showed not only a fine lot of combs, run honey and wax, but also had small glass cases of the bees at work which proved a great attraction to the natives, many of whom had the opportunity of watching the bees busily engaged in making up their combs for the first time in their lives. The bees which Father Gex is so skilful in cultivating are not the European hive bee, but the Indian kind, *Apis indica*, a common bee here. It is a smaller insect than the English bee. It may be hoped that this attractive exhibit may induce some of the natives to cultivate the art of bee keeping, which indeed is not absolutely unknown in the Peninsula, as I have seen in the homes of Chinese near Batu Pahat, hives of cylindric shape made of rattan hung up in the rooms and tenanted by the same kind of bees. Dr. Haviland of Kuching, many years ago devoted some time to apiculture and introduced European bees also from Italy, but they did not thrive as well as the local kind.

The honey both in comb, and run, shown by Father Gex would be hard to beat and the wax produced was of the highest quality.

Samples of the comb of the large wild bee *Apis dorsalis* were also exhibited. This is the common large bee which produces only one large comb upon the branch of a tree, and is not suited for agriculture. Its wax collected by natives in the forests is, however, an article of trade and of fairly good quality but usually very yellow.

Spices.—These were hardly as good as we remember to have seen in byegone shows. There were, however, fourteen exhibits of dry nutmegs, some of which were decidedly good, and twelve samples of fresh nutmegs in the husk. The best of the nutmegs competing, however, were not to be compared with the sample of Banda nutmegs shown by Mr. Diepenheim, which of course are a very much larger class of nutmeg than those we usually get from the Peninsula.

Cloves were fairly good but many better samples have been staged at the earlier shows, and there were only ten exhibits.

Mace both red and yellow were of fairly good quality taken all round, and some of the red mace was quite superior.

Collections of spices for curries were represented by five exhibits, some of which were very complete in the number of kinds of spices shown. They were in some cases too very nicely put up, but there was a tendency to give very small samples of each kind of spice.

Some excellent samples of *Curry Powder* of a very special make were shown by Watt Lee & Co.

Pepper.—Both black and white was fairly well shown, and some of the samples were first class. But the number of exhibits was not as large as in the former days when pepper was so largely cultivated. There were many fine examples of white pepper which were disqualified owing to their having been grown outside our area.

Ginger and Turmeric.—Were both good and abundantly shown. The turmeric, however, was mostly rather small in the rhizome. The Ginger was good, and some of large size. Both in these classes and in that of arrowroot, some exhibitors have a tendency to send their samples unwashed and coated with mud. Although this does not necessarily count as a point against the exhibit, yet it detracts from the appearance of the sample and is a distinct defect in staging.

Patchouli was well represented. A larger number of exhibits being staged than on previous occasions. Kamuning Estate came well to the front again with some beautifully prepared leaves, and there were other good samples, but some of those shown were too full of stalk.

Tuba root was shown in very extensive series, with roots of all sizes and forms. They were all fair to good and formed a difficult class to judge. Among them several natives showed

"a new Tuba root" which appeared to be the stems of *Tinospora cordifolia*.

*Dammar*s.—Were more abundantly shown than on the last occasion and some masses were very large. There was a good variety in the collections, but they were chiefly of the Damar daging type, and of other dark resins. A fine series of Moluccan damars was shown by Mr. Diepenheim. These further eastern damars known mostly as copals in local trade are the most in demand in Europe, being clearer in colour than most of the local ones of the Peninsula.

Rattans.—The collections of rattans were decidedly above the average of those seen at previous shows and they were also more plentiful. Messrs. Tan Ah Choon exhibited some beautifully prepared Borneo canes, which were awarded a diploma for their careful preparation, though not being produced within the limits of the Peninsula, and being of two varieties only they could not enter for competition with the collections of jungle canes.

Bamboos.—Collections of samples of these were numerous, and there were some good specimens. The curious branched culms, and flexuous culms and other abnormal specimens were as abundant as usual.

Walking-sticks.—Though the prize for these is offered for sticks unfinished and unmounted far the greater part were highly worked up and ornamented. The collection was much larger than on previous occasions and some of the sticks were really very fine, and they were much in demand by purchasers. It would, however, perhaps be preferable in future, considering that most are works of art, to transfer this class to native industries.

Rice, paddy, and pulut formed a large feature in the exhibition but it must be admitted that the collection as a whole was not as large as we have seen on other occasions. There were several collections for the Mukim prize in which were over fifty varieties, the finest lot containing seventy-two named kinds. Cooked rice was not shown, and as this has commonly happened before, perhaps it would be as well to omit this class in future from the exhibitions. As is usual some of the Malay penghulus were called in to aid in judging the rice and paddy exhibits, but even with their aid the work of examining all the exhibits and judging of their respective merits took the judges a long time.

Tapioca roots were quite up to the average though not as fine as those shown at Penang show, but Tapioca roots are cumbrous things to travel with and the greater distance from the big tapioca culture area is perhaps the reason why fewer large specimens were sent.

Tapioca Flour.—There were a number of good exhibits.

Five or six samples were very near one another in quality and it was difficult to decide which was the better of the two chosen as leaders.

Flake.—There were very few exhibits of really good quality.

The exhibits from Malacca were rather disappointing, and were certainly not as good as those shown at the Kuala Lumpur Exhibition.

The sample that was far and away the best in this class was exhibit No. 599, made we believe at the Malakoff Estate, Province Wellesley.

The same exhibitor shewed a fine specimen of flake siftings the make of which was exceedingly regular.

Pearl.—There were some nice exhibits of Medium Pearl but we only saw one good sample of seed.

Sago Pearl.—There was only one exhibitor in this section, Messrs. Brinkmann & Co., and the samples shewn were well made and of good colour and quality.

Flour.—The two or three exhibits presented nothing special in the way of quality.

Maize was exceptionally good this year, the cobs shown being mostly large and well-filled, but there was practically only one variety shown.

Biscuits.—A number of specimens of local made biscuits were shown by Messrs. Ho Ho. No prize was offered for competition in products of the bakery.

Soap.—A prize was offered by Dr. Lim Boon Keng for the best locally made soap. Unfortunately the offer came after the printing of the schedule of prizes so that there was no possibility of informing the local manufacturers of this article that there would be a prize offered. A Chinese firm, Messrs. Hock Leong, however, brought some excellent samples of this and obtained a medal. The same firm exhibited also a number of sweets, manufactured by themselves.

Dried fish, locally prepared.—Was also the subject of a prize offered by Dr. Lim Boon Keng, unfortunately too late to get a competition, and none was shown.

Wet Gambier.—There were only three exhibits of this important local produce.

The prize winner was the only fair sample shewn, while that exhibited by the "Gambier Society" was distinctly poor.

In view of the importance of the export trade in this article it would have been more interesting had there been shewn examples of the product in its various stages of manufacture—from the green leaf to the final block.

Cube Gambier.—The exhibits in this section were generally good although some looked as if they had been prepared specially for exhibition purposes.

Gambier Extract.—This was an interesting sample of what looked like Gambier-dust, prepared evidently by some process of crushing the dried gambier extract into very small flakes.

In this state the gambier should be in the most suitable form for export. The only objection we saw to this process was the tendency of the "dust" to become caked by contact with moist atmosphere, but this might be obviated if the stuff were packed in air-tight cases.

Indigo.—There were a number of bottles of this dye both liquid and in powder, than at recent private exhibitions, and the quality was decidedly better than at the last exhibition. This indeed might have been expected in Singapore where the dyeing business has by no means died out yet. The samples varied a good deal in quality and one bottle contained liquid of a remarkably brilliant and attractive blue colour which however unfortunately was not indigo-colour.

Cutch.—A sample of the Mangrove cutch made at Santubong in Sarawak was shown. Great improvements in this manufacture have been made in late years, with a corresponding increase in demand.

The Governor's Cup for the best general exhibit in the agricultural section was easily won by Mr. Machado of Kamuning Estate, Perak, who made a good try for it at the last year's show. He took eleven prizes in all, viz., first prize for best collection of essential oils, best sample of patchouli, best collection of medicinal plants, best collection of fibres, best cotton, best kapok, best dried betel-nuts, second prize for best black pepper, best arrowroot, best limes, and third prize for turmeric.

On the whole it may be said that the agricultural produce was very good and representative of the products of the Malay Peninsula, very few of the classes in the schedule were not represented and these consisted only of boiled rice, and clove oil.

At the same time it must be admitted that some classes were not as well represented as in previous exhibitions.

Vegetables.—The exhibition of vegetables was equally poor, probably because the chief vegetable growers, the Chinese, did not understand what the exhibition was about. The idea is utterly foreign to them, and the vegetable-growing class, in spite of explanations, notices in Chinese, etc., failed to send samples of their produce. Mr. Campbell sent from Perak Hills a grand collection of European vegetables as he did last year, with several novelties. Perhaps a time may come when our hills will afford a good supply of European vegetables to the dwellers in the plains. Many of the hills could be opened up for vegetable gardens and the produce brought down and shipped to the larger towns. Mr. Campbell has shown clearly that the vegetables can be grown well and can be brought to Singapore in prime condition. That they were highly appreciated was shown by the run on his exhibit at the end of the show. The supply of wholesome and good European vegetables to residents would go a good way in hygienic improvement of the European's life.

Fruit.—Was again not up to standard. Last year the show held in Penang was not as good as it might have been because much of the fruit was not ripe. This year the exhibition was put a little later, and unfortunately the great crop was nearly over. In Singapore at least for several seasons the fruit crops have been very inferior, and the supply has not been what it was in former years. This may be due to peculiarly unsuitable weather, or it

may be due to the ageing of the old trees planted many years ago and now dying out not having been replaced by younger plants.

The greater number of the prizes were taken in this section by Malacca, Johore, Perak and Selangor.

No specimens of Binjai, Langsats or mangos were shown.

In the same shed were staged the table decorations and cut flowers, the honey, and the eggs, and also the preserves. In these latter there was a great improvement, chutneys, jellies, preserved fruits, curry powders, pickles and sweetmeats were well staged in abundance and very good were the samples.

FLOWERS AND FLOWERING PLANTS.

The exhibition of horticulture was distinctly disappointing, what was shown was in many cases good but when one remembers the splendid exhibitions in years gone by, one cannot but feel that a very great deal of the early enthusiasm for gardening in Singapore has disappeared. Some of the old exhibitors whose gardens were a pleasure to see have long gone from us and their plants have been dispersed, others are still with us and showed what they had, but we missed the great masses of Heliconias, Selaginellas, and ferns, Marantas, Crotons and still more perhaps the flowering-plants. The cause of this is perhaps the more frequent home-going of the Europeans. The ordinary resident goes home and auctions all his property including his plants. He does not care to furnish his house well on his return because he may go home again in a few years, so he just gets a few common things to fill up the verandah, and leaves their care to the kebun.

We have unfortunately not received any report of the exhibition in this class from the judges. Some good palms were shown, among them a very fine *Martinezia crosa*, shown by Mr. Down, some fine clumps of *Chrysalidocarpus lutescens* by the proprietors of the Raffles Hotel.

A few good orchids were shown, including a fine *Cattleya*.

Mr. Choa Kim Keat showed a very nice lot of succulents, the dwarf cacti being remarkably good.

Mr. Seah Liang Seah showed a number of quaint contorted trees over eighty years' old.

In many of the classes there was no second prize awarded and there was no award given for coleus, six crotons, panax, selaginellas, best specimen foliage plant, achimenes, amaryllis, asters, balsams, three cannas, dianthus, eucharis, gloxinias, three roses, zinnias, collection of flowering plants, cut asters, chrysanthemums, dahlias, roses, hand bouquet, or wild flowers arranged for effect. Table decorations were entered for by several ladies, and Mrs. Down carried off the first prize with a neat decoration of purple and white cosmos, very light and pretty. Mlle. de Gaspery was second with yellow cosmos (Klondyke) and grasses, Mrs. Aptroot showed a very much more elaborate and design of arches in asparagus which, though a little too large for the table, was good and light in style.

Except some fine palms from Mr. Chesney Duncan in Penang, all the exhibits in this section were from Singapore, the distance from the Native States and the journey by sea preventing its being possible to bring down flowers in good condition. Mr. Choa Kim Keat, one of our most enthusiastic horticulturists, carried away a large proportion of prizes, and his exhibits formed a large feature of the exhibition.

The thanks of the Committee for the excellent exhibition in these sections was due to the District Officers of the Malay States and colony who did not spare any labour in getting the natives to send in specimens, and in selecting that was worthy of being sent to the exhibition. Among those who were specially energetic should be mentioned, Mr. Peel, Mr. Firmstone, Mr. Chevallier, Mr. Laidlaw, Mr. Campbell, Mr. Simmonds, Mr. Main and the Residents and Resident Councillors. For the school exhibits the excellent result was due to Mr. Collinge. Rajah Hitam Nongchie did good work both in collecting funds and an excellent series of exhibits from Johore States.

Rubber.—There was really a very good exhibition of rubber of all kinds and forms, mostly as might be expected from the European estates, but there was already some shown by natives. There were 18 entries in Rambong sheets and ball mostly from Perak and Selangor there being only one entry from Singapore and one from Penang. Considering Rambong is a more recent industry than Para the exhibits were fairly representative.

There was a fine display of Para in the various forms of biscuits, sheets, crepe, worm and scrap. Few of the biscuits or sheets however were thoroughly dry, a point all exhibitors should remember, as an exhibit for competition should, whatever class exhibited, be in perfect condition. Undoubtedly deserving of pride of place were the blocks exhibited by Mr. F. Pears of Muar, and the high price recently obtained on the London market for this rubber emphasises the favourable opinion formed at the local show of this form of preparation. In biscuits the first prize fell to Kamuning Estate, Perak, and a diploma to the Highlands and Lowlands, Selangor, there were also some very fine native exhibits in this class.

The first prize and diploma for crepe went to Lanadron Estate (Mr. F. Pears) while Highland and Lowlands and Kent Estates were highly commended.

Para sheets were well contested, the first prize being secured by the Highlands and Lowlands Estate, Selangor, and the second prize went to Pataling Estate. Mr. Bird of Kuala Kangsar, Perak, obtained a diploma for a sample of excellent sheets which seemed perfect. The Penang Sugar Estates were highly commended. Altogether there were 15 entries in this class.

In the class "other preparation" which included Mr. Pears blocks there were 19 entries. The diploma for rubber and highest prize going, as said before, to Mr. Pears, but a first prize was awarded to Bertams Estate, a diploma to Highlands and Lowlands, and Yan Seng, Perak, highly commended for long carpet-amber coloured sheets. In this class there were also several other interesting exhibits.

Class 60, Para-general exhibit, packed in boxes as sent from estate for export included 10 entries of 17 boxes of different preparation, the diploma and cup being carried off by Lanadron (Mr. Pears) the advantage of this preparation as a simple and cheap means of transport being obvious. The second prize going to Vallambrosa Estate, Selangor, who exhibited some splendid rubber but did not meet with usual luck.

Several sets of photographs of estates and methods of tapping were shown by Mr. Campbell and Mr. Douglas and others.

Para rubber seeds were shown though there was no class for them.

Among apparatus use for cultivation and preparation of rubber may be mentioned a large series of rubber tools exhibited by McAlister & Co.

A working plan of a rubber dryer by means of desiccated air was exhibited by Mr. Swan, which may prove an useful adjunct to the planter.

Mr. P. T. Burgess showed an ingenious and very simple girth-measurer, by means of which any cooly can take the measurements of all the trees in an estate in a very short space of time, so as to give a correct idea of the extent of tapping area in an estate. A description of this simple apparatus is promised for the Bulletin.

POULTRY.

As a whole there was a poor show of poultry, only about 50 pens were shown. Two pens of six—Buff, Orpingtons and Minorcas.

The Orpington winners were a fair average lot, the cock on the small side but the hens were better. The Minorcas, good birds otherwise, failed lamentably in their legs—all were feathered. The Orpingtons were prize winners at Penang also in 1905.

The best pair in the show were a Malay game cock and hen, really good specimens and were easily the best birds in the show.

Two pairs of Brahmas were shown. If the winning cock and losing hen had been placed together it would have been a very fine pair. Brahmas do not do well in this damp climate and their plumage is very much affected. Crossed with or by Malay local game, they should do well, as a pure bird they are disappointing.

Of turkeys only two pair were shown and poor ones at that.

Geese a fair number, but poor and stunted in appearance—only one good and shapely bird amongst the lot.

One pair of indifferent Guinea fowl. Two pair of Victoria pigeon were shown, very handsome birds and easily kept in captivity.

The jungle fowl shown was a very scraggy lot and the hens did not strike one as being jungle hens at all, very few were exhibited.

It is an extraordinary thing how many persons think that an agri-horticultural show is an offshoot of Barnum's and any freak or dime-museum monstrosity should find a place in it.

It is a great pity that more interest is not taken in this class of produce—it affects everyone of us and should have better attention paid to it. Poultry repay interest taken in them, but it must be whole-hearted. Natives showed hardly any poultry although they took considerable interest in the exhibition.

A few pigeons and canaries were exhibited, none of any very great interest.

Cats.—There were not as many cats shown as might have been expected. There were a few good Persians, notably Mrs. Daly's grey Persian, a beautiful animal which had taken prizes at shows in England. Only three Siamese cats were shown but these were fairly good. English cats were not particularly striking.

Cage birds.—There was little very striking in this class, a few good parrots, and some canaries, and some birds of paradise. Mr. Lim Lee carried off a first prize with a very beautiful small bird, black with an orange breast and a long tail. There were also a good many Java sparrows of various colours shown.

Rabbits and guinea pigs were poorly shown, though there are many rabbits of good class kept in Singapore and the exhibition might have been better.—C. HAWTREY.

NATIVE INDUSTRIES.

The total number of entries, of which there are records, comes to about 1,000, allowing 50 for the Negri Sembilan and Singapore, the latter contributing very little indeed. Of these I find that 575 came from Perak, 83 from Selangor, 126 from Penang, and 167 from

Malacca. These figures show to what extent this Division was indebted to Perak for its exhibits. In embroidery alone Perak exhibited 35 specimens mostly of very fine work; two first prizes being awarded to entries from Kuala Kangsa, and Papan. Two second prizes were awarded to exhibits from Malacca, which sent 20 entries, and was the only country approaching Perak in this class. Other headings under which Perak exhibited largely were ornamental baskets, 22 entries, rope and twine, attaps, mats and serih sets. Models were very numerous. Of the model snares and traps 38 specimens came from Perak, very few indeed coming from elsewhere. Of the old silver-work practically the whole came from Perak (18 entries) and Selangor (7 entries) but the first prize was awarded to some new work by a Singapore silversmith. Under brass-ware nearly all the entries were from Perak, although a Penang exhibitor secured the first prize. For ornamental baskets 5 prizes were awarded, all going to the Malacca exhibitors. The tin-ware from Seremban was as usual a very conspicuous exhibit. The Malacca lace workers also attracted much attention, as did the sarong-weavers, and the Chinese drawn thread workers. There were some very handsome old kriss-sheaths shown, but in this, as in other cases, the preference was given to new work, the first prize going to a Butterworth exhibit. The latter part of the prize list, from 307 to 314, calls for no remarks, the prize-list which is in your hands showing the results. Class II (school-exhibits) was separately managed and judged. I enclose a few notes on matters of organisation, arrangement of the prize-list, etc., which may be of use in future shows. Thanks are due to Messrs. Coutts and Marriott for the great assistance rendered by them in the work of this Division.

G. A. HALL,
Honorary Secretary, Division E.

PRIZES AWARDED AT THE SINGAPORE AGRI-HORTICULTURAL SHOW 1906.

Division A.—AGRICULTURAL PRODUCE.

Class No.		Exhibit No.	Amount, \$
1.	Arrow-root fresh :—

NOTES ON MANAGEMENT OF EXHIBITIONS BY

G. A. HALL.

—:O:—

a. As to organisation preceding the opening, it would be an improvement to make a register for each section, as the entries are notified, with a page devoted to each class, so that all the entries for a class, with the exhibitors' names and addresses, would be shown together. The secretary could then accompany the judges with this register, and note down the prizes in it, and the preparation of the prize-list would then be a mere matter of copying. Such an arrangement would save much time and trouble, and would further enable the Secretary to allot his space beforehand, by showing the items under which the largest quantity of exhibits was to be expected. It would also form a record of the show for further reference.

b. The prize-list should not be copied from any former prize-list without careful examination. It should not be adopted by a large and hurried public meeting, but gone through section by section by a few persons who have had actual experience in former shows. Take for instance Division "E." There were complaints that people could not find things because they were not arranged in the order given in the prize-list, but with a prize-list like this it is not possible to keep to the order. First we have ornamental baskets, next lace-work, then leather work, rope, attaps, kajangs, mats, hats, brooms and other collections of articles made from coconut-palms. It is obviously impossible to arrange attaps, kajangs and similar exhibits on shelves alongside lace-work, and curios made of coconut shells. Further down we came to sireh apparatus then models and then wood-carving and embroidery, fishing nets between krisses and sakei articles and bird-cages between flooring tiles and ploughs. The best way would be to arrange all delicate and valuable articles together so that they could be displayed in the order given in the prize-list. For instance lace, silks, embroidery, silver ware, sireh apparatus, krisses, curios made of coconut shells, brass-ware, and wood-carving might easily be classified in the order in which they could be displayed as could also cumbrous things like attaps, kajangs, chicks, mats, brooms batam-work, and earthenware. Models should have a shed to themselves. They take an immense amount of room and require special accommodation. Perhaps a shed to contain all models, attaps, kajangs, brooms, brushes, fishing-nets, ploughs and agricultural implements generally, would be the best solution of the difficulty. The result of crowding models into the native industries section is that space is filled by them which is badly wanted for displaying embroideries, silver-work, sireh sets, and so on, and many interesting exhibits are so packed that they can hardly be seen, and cannot be arranged at all.

c. The question of exhibiting antique articles requires consideration. Assuming that the object of this section is to stimulate native handicrafts, it is a little difficult to see why ancient jewellery should be allowed any prizes at all. In any case old work should be in a separate class, and should not enter into competition with

new work at all. For silver-ware it would be as well to provide cases that could be locked so that they need not be removed every evening. The prize-list of Class II of this section for school-exhibits is far too small, and should have many items added to avoid an unwieldy number of exhibits under "Miscellaneous." It would be better another time to give this class more wall-space, and to separate it entirely from the native industries section.

d. As to the construction of the shed for native industries, rough doors or half-doors should be provided so that all entrances but one could be effectually closed at 6 o'clock, and the shed emptied before dark. Plenty of strings should also be fixed between poles and against walls for showing mats. Adequate police arrangements should also be made for clearing the shed, and it should not be left to members of committees to turn people out. Owing to the absence of proper police precautions it was impossible to clear this section before dark, and a certain number of articles are stated to have been stolen. This is a danger to which this section is particularly exposed as many of the exhibits are small and valuable. Arrangements should be made for keeping the ground as dry as possible by digging drains, laying down cinders or sand, and a few coolies should be engaged for each particular section. The want of small supply of labour was much felt, e.g., for clearing up the floor after the exhibits had been arranged, putting up barriers to close entrances, running errands, and stowing away packing cases, and so on. It is no use engaging coolies for the show generally because they are never at hand when wanted. When there are any displays likely to attract a crowd, they should be arranged in a place with one entrance and one exit so that the crowd, can be kept moving in one direction only.

e. Much more care is necessary in the translation of the prize-list into Malay. There were many mistakes which caused annoyance to exhibitors who had been misled by them. For instances under No. 288 the translation implies that the articles must be made out of the trunk of trees. Under 302 the translation means that the exhibits are to be only kriss-sheaths which was perhaps hardly intended. Under 289 and 290 the single word "kabong" or "nibong" is insufficient.

f. Large cards showing the numbers and nature of the classes of exhibits should be prepared beforehand. These are of the greatest assistance in arranging exhibits as they enable the space to be allotted beforehand and any members of committee helping in arrangement can direct exhibitors to the proper place, without difficulty or confusion.

g. It seems advisable to make more definite provision beforehand for landing exhibits and housing exhibitors. On the Tuesday before the opening two tongkangs with exhibits were waiting off the reclamation from early morning till 3 o'clock in the afternoon before landing anything, and many who were expecting to find house accommodation found nothing ready for them. This however is a simple matter which requires only to be thought of, and entrusted to two or three members of committee in plenty of time.

h. The question of the size of committees is worth consideration. There is no object in having a huge general committee and in any case meetings of the general committee should be as few as possible. Beyond general questions such as the choice of site and the date of the exhibition there is no use in assembling the general committee at all, and mischief may easily be done by a large meeting which is easily misled through inexperience, e.g., in this case they very nearly shifted the site at the last minute, and, if they had, the financial result would have been disastrous. Also in sub-committees, appoint two or three men who are likely to work, and let them add to their number if they want to. It is useless to nominate ten men if five have not the time or the inclination to assist, and never come near the place except as visitors with free tickets. "Family tickets" should be abolished altogether.

i. The prize-list might be drawn up something in this way. All models should be cut out of this division altogether. Lace, embroidery and sarongs should come together, krisses and knives, old and new, next. All metal work should form one group, i.e., silver (old), silver (new), sireh sets, brass and tin. The same with all wood-work and carving whether made from coconut trees, kabong, nibong or other wood. Leather-work and rope could go in anywhere, and baskets, mats, hats, bertam work and bird cages should come together as should bricks, tiles and fancy earthenware. Attaps, chicks, and kajangs could come at the end, but would be better accommodated outside the shed altogether. Further there seems to be no sense in making a cast-iron rule that every first prize is to be \$10. An exhibit like kajangs is not worth the same prize as a piece of embroidery, nor is a bird-cage worth the same prize as a silver exhibit or a silk sarong. The value of the prizes should certainly bear some relation to the value of the exhibits.

RULES AND REGULATIONS RELATING TO EXHIBITS.

1. All exhibits must be the *bonâ fide* property of the exhibitor.
2. Competition for prizes shall be open only to exhibitors resident in the Colony of the Straits Settlements or the States of the Malay Peninsula.
3. Competition (unless otherwise specified) shall be confined to exhibits grown or manufactured in the Colony of the Straits Settlements or the States of the Malay Peninsula.
4. The Committee will appoint Judges, from whose decision there shall be no appeal.
5. The Judges may withhold a prize when they are of opinion that there is not sufficient merit to justify an award, and may award special prizes for any exhibit not contained in the schedule.
6. No exhibitor shall be awarded two prizes in any class.
7. The arrangement of the exhibits shall be subject to the directions of the Committee.
8. The Committee reserves the right to refuse any entries that it may think fit to reject, and to cancel any class at any time before the 2nd August, 1907.
9. Exhibitors desiring free transport by Railway, must give notice to a District Officer, or the General Secretary, who, if the exhibits are approved, will provide them with numbered tickets and a free third class pass on the Railway for themselves and their exhibits. A reduction of 25 per cent. off the usual freight will be made by the Straits Steamship Company on all *bonâ fide* exhibits. The Committee does not hold itself responsible for exhibitors' expenses.
10. All entries must be in writing and must reach the General Secretary at least seven days before the first day of the Show.
11. Exhibitors in Division C must provide for the care and maintenance of their own exhibits.
12. No exhibit (except live animals) may be removed from the ground before the close of the Show.
13. The Committee is empowered to exclude, or remove, any animal which in its opinion is not in a fit state for exhibition.

14. Exhibitors in Division C will only be permitted to remove their animals from the Show grounds on obtaining an order of removal from the General Secretary or the Honorary Secretary of the Division.

15. No exhibit in Divisions A, C, D and E will be received later than 6 p.m. on the 8th August, 1907.

16. All reasonable care will be taken to provide for the safety and careful preservation of exhibits of every kind sent to the Show, but it must be clearly understood that the Committee does not hold itself responsible for the loss of, or the damage to, any exhibit, either in transit or during exhibition. Provision will be made for keeping articles of value under lock and key at night.

17. Government exhibits shall not be eligible for prizes in any class.

18. Winners of prizes of \$10 and upwards may have a silver medal if they prefer it to money.

DIVISION A.

cultivated soil was added, the plants recovered, formed nodules on the roots, and also became capable of absorbing nitrogen. These nodules, upon examination, were found to be full of organisms which, since the sand in which the plants were growing had been sterilized, could only have been derived from the water extract of the cultivated soil that had been added. It was concluded from these observations that the assimilation of free nitrogen by leguminous plants takes place after the formation of root nodules, which are caused by some organism present in cultivated soil.

These organisms have been isolated, and further observation has shewn that the different forms associated with different leguminous plants are all modifications of one species, to which the name, *Pseudomonas radicumicola*, Beyerinck, has been assigned.

As regards the actual way in which the bacterial organism enables the plant to assimilate nitrogen from the atmosphere, since it has been proved that the organism itself, even when isolated from the plant nodule, can in certain forms, take up nitrogen, and store it up in itself as nitrogenous matter, there seems little doubt that it also absorbs nitrogen in this way when in the nodule.

The present view of the case, briefly stated, is that, firstly, the bacterium enters the root of the plant, where its originally minute form changes into a rod-like shape, multiplies, assimilates nitrogen, and stores up nitrogenous compounds, and then finally, in the nodule, the rod-like form changes to the branched form, which is ultimately destroyed by an enzyme, or ferment, produced within the plant. The nitrogenous matter is dissolved and absorbed by the plant, and the nodules gradually diminish in size.

In consequence of this power of leguminous plants to obtain supplies of nitrogen from the air, it is obvious that they are of much greater value for green manuring purposes than non-leguminous crops, as apart from adding organic matter to the soil, their growth and subsequent ploughing-in are equivalent to the application of an expensive nitrogenous manure, such as sodium nitrate or sulphate of ammonia.

It has been shewn that some soils, though capable of growing leguminous crops, are deficient in the specific organisms which enable these crops to assimilate nitrogen. As the result of a complete scientific investigation of the nature and mode of action of the organism, however, the U. S. Department of Agriculture now supply pure cultures of the bacteria in question, by which the soil of any given field, or the seed about to be sown, may be inoculated with the nitrogen-fixing organism. It is stated in the Bulletin dealing with the above investigation that the following conclusions have been drawn, as the result of the observations made by the Department: Inoculation is not likely to produce any beneficial effect upon soils which already contain the necessary bacteria, or upon soils rich in nitrogen, or again upon soils which, on account of their acidity, are unsuitable for the growth of leguminous plants. Inoculation is undoubtedly of value where the bacteria do not already exist

in the soil, or have lost their activity, as indicated by failure in the growth of leguminous crops and absence of root nodules.

H. N. R.

The Outlook for Camphor.

The following extract from the *Pharmaceutical Journal* for June 22 last, refers to the possibility of a substitute being found for camphor in the manufacture of celluloid, and to the production of camphor by synthetic processes:—

There have been rumours of a substitute for camphor in the celluloid industry, and although there may be little foundation for such rumours, there is no doubt that research in this direction has been encouraged by high prices. Then there is the problem of synthetic camphor; several processes are being worked in England, in Switzerland, and in the United States, and there is a probability that before long (provided the price of turpentine, on which these processes depend, remains reasonably normal) the synthetic product will be offered at a price lower than the present price of the natural article.

H. N. R.

THE 4TH JOINT ANNUAL AGRI-HORTICULTURAL SHOW OF STRAITS SETTLEMENTS AND FEDERATED MALAY STATES.

The 4th annual Agri-Horticultural Show was held this year at Kuala Kangsar on the 9th, 10th and 11th August. So far as beautiful surroundings are concerned no finer spot could have been selected, but the want of accommodation for Exhibitors and visitors attending the Show was severely felt, a fact which must be recognized in selecting the venues for future Shows.

Beautiful weather prevailed for the three days. The form of the buildings was to some extent similar to the Penang Show *i.e.*, three sides of a square, with a band stand and Kiosk in the centre. The shed for agricultural implements and the rubber coagulating machine were in an annexe at right angles to the building containing native industries. The Poultry were housed a little distance from the last-named shed whilst the cattle-sheds were some distance away near the river.

As was to be expected Perak shewed up magnificently and may be said to have monopolised the Show, fully four-fifths of the exhibits belonging to Perak. His Excellency the Governor accompanied by Miss. ANDERSON, His Highness the Sultan of Johore etc. amid a brilliant throng of Europeans and natives opened the Show at 11 a.m. His Highness the Sultan of Perak who spoke in Malay which was interpreted by the Resident (Mr. E. W. BIRCH) welcomed His Excellency the High Commissioner and thanked him for his

presence, he contrasted the country before the British occupation and now and said how delighted he was when he heard that the Show was to be in Perak, and that he was glad to point out the interest taken in the Shows by his people of their free will. His Excellency who spoke for about a quarter of an hour, after thanking His Highness for his kind words referred to agriculture generally and Coconuts and Rubber in particular. He also dwelt upon the labour question and the methods Government was adopting for putting it on a satisfactory basis, after a tribute of praise to the hard working Committee he declared the Show open.

Exhibits:—Speaking generally the Exhibits were of a high standard and as might have been expected the Rubber exhibited was an advance on previous Shows both as regards quantity and improved appearance and gave the Judges a difficult task in deciding the relative merits. Padi and Pulut was in strong force and shewn in a variety of bags, bas-ets, etc. Betel-nuts were good, as likewise were the Coconuts which were an even lot. Copra was very fair, some thirty odd lots competing, the various other classes call for no special remark except perhaps the Exhibits of Medicinal and dried plants shewn by Mr. MACHADO of Kamuning Estate, of the former some 222 varieties were shewn, the labels in most cases giving the uses to which they were put. The dried plants were also neatly arranged as were the samples of fibres put up by the same gentleman.

The Horticulture Division so far as plants and flowers were concerned was a failure, the few poor specimens that were shewn only served to accentuate the fact. On the other hand the fruit was distinctly good and more particularly the Durians some of which were of enormous size, all the classes in the Fruit Section filled well.

The usual excellent collection of vegetables from Taiping Hills was again in evidence, very nicely arranged by the Honorary General Secretary Mr. T. W. MAIN.

There were a few interesting Exhibits of preserved fruits, Pickles, Chutnies and Eggs which were really very good.

Unquestionably the strength of the Show lay in the Division devoted to native Industries. In the three former Shows Perak has always been the backbone of this Division, and it was expected that on the present occasion that Perak would improve on previous efforts. An enormous number of the most beautiful Exhibits were staged, many of which found purchasers. In this Department some excellently bound books were shewn that had been done in Kuala Kangsar Gaol, as well as a miscellaneous lot of furniture, chairs, etc. made at the same place, they all shewed very careful workmanship, and large orders were booked for duplicates.

In the Division for Agricultural Implements the chief attention was drawn to the Federated Malay States Engineering Company's Exhibit, of their washing and coagulating machine, from some latex supplied by Kamuning Estate some excellent crepe rubber was

turned out in less than half an hour, and could have been ready dried and packed for shipment home in a few hours if need be.

Mention should be made of an exhibit in this Section by Mr. A. B. STEPHENS of Taiping of a corrugated iron sheet, perforated with slits on the arched or convex surface, it is designed for a covering for plant houses where light is essential without heavy rain, by having the slits on the convex portion only, and the concave left intact the latter forming water channels. Mr. STEPHEN was awarded a Diploma for his invention.

The Divisions for Cattle and Dogs were of local interest only and call for no special remark. The grand collection of Perak Elephants gathered together for the occasions however was a source of never ending admiration.

Mention should be made of a collection of Miscellaneous Exhibits from Labuan the most interesting of which were the Gongs and Metal works of very unique designs and apparently old. Many of the best specimens were secured for Raffles Museum.

W. FOX.

Rubber at the Agri-Horticultural Show.

The Rubber shewn at the Peninsular Show this year exceeded all previous Malayan Exhibitions in quantity and in quality. The Para sheet and biscuit class contained the greatest number of Exhibits, though crepe ran it close. In both so many exhibits approached a high standard that the Judges found it difficult to separate the prize winners. Very little of the material, particularly in sheet and biscuit, was of that pale colour, which, according to advices from home, seems to be favoured by buyers just now. Possibly the spell of dry hot weather immediately before the Show had something to do with the prevalence of dark colour. Many Planters consider that light-coloured crepe or sheet is more difficult to produce in dry weather than at other times. Dry block was more poorly represented than the first two classes, and wet block even more so. The standard was high and the quality very uniform in dry block. The wet block exhibits were indifferent.

There was a fair number of exhibits, in the Rambong class, and, excepting the first few which were well ahead of the others, the quality was more uniform than in any other group. The Special Cup for scrap drew few competitors, probably due to the fact that notification of it was given very late. Rubbers other than Para or Rambong were very poorly represented, though the winning exhibit—crepe from *Willughbeia* sp.—was very good. A good collection of various wild rubbers and seeds came from the Government Gardens, Kuala Kangsar; their Ceara sheet was good in

appearance and of fair quality. There are not enough people willing to devote the amount of attention needed for collecting and experimenting on rubbers of comparatively little financial value. The Guttas were few ; the winning exhibit was a Gutta Taban.

It is extremely difficult owing to the lack of knowledge of definite criteria in rubber to separate lots differing slightly in quality.

The following table gives the points on which the Judges marked the exhibits; the maximum of marks under each heading and the number actually awarded, which is the average of the different judges, judging by points is the fairest method but is of necessity a longer process than the rough and ready process of judging by selection, so much so that the judges were unable to complete their work on the first day. Fifty marks being the total by doubling their total competitors arrive at the percentage of the total maximum awarded to them.

It appears that most exhibits arrived late on the day before the Show opened ; this caused considerable confusion, and accounts for some exhibits appearing without numbers. It is hoped that in future there will be no grounds to make this complaint. Further it is desirable for Exhibitors sending in two or more exhibits of different merit, to label them A, B, C, etc.

The judges, the Acting Director of Gardens, Singapore, Mr. W. FOX, the Chairman of the United Planters Association, Mr. R. W. HARRISON, and the Director of Agriculture, Federated Malay States, Mr. J. B. CARRUTHERS, were assisted in their task by Mr. W. G. GALLAGHER, Government Mycologist and Assistant to the Director of Agriculture whose help hastened considerably an interesting but lengthy task.

J. B. CARRUTHERS.

GOW, WILSON & STANTON, LIMITED— India Rubber Market Report.

13, ROOD LANE, LONDON, E.C.

August 9th, 1907.

At to-day's auction, about 843 packages of Ceylon and Malaya Plantation grown rubber were under offer, of which, about 427 were sold.

The auction having been postponed until after the holidays, offerings were rather larger than usual, the total weight amounting to 45 tons, Ceylon contributing over 10, and Malaya about 35 tons.

Competition was in most instances somewhat irregular, and a decline of about 1*d.* to 2*d.* per lb. was recorded for the finer grades, except in the case of a few lots shewing particularly attractive quality which were well competed for, and sold up to 5/10 per lb.—this price being realized for some Ceara biscuits from Rangbodde Estate.

5th Apr. Annual
Show

Singapore. Surely when this was proposed, neither the Engineer nor the Medical Health Officer had in mind the state of vegetable cultivation in the Colony. The bulk of our population consists of people, whose food is principally a mixture of rice and vegetables. Without the night-soil removed from town the numberless vegetable gardens in the country must be abandoned. The result will inevitably be that vegetables will be grown in Johore and elsewhere—Rhio perhaps and if there is danger in the use of such matter, the risks of infection will be increased, since our sanitary authorities cannot possibly control these foreign growers. It seems to us that the most useful method of disposal of excreta for this Colony—in view of the urgent needs of vegetable growers—is some scientific means of treating the manure in different depots in the country and then distributing it to the gardens. The risks of this form of manure carrying infection are not great inasmuch as the night-soil is thoroughly fermented before it is put to the soil. One can easily conceive of its utilization in an appropriate manner without offending the taste of even the most fastidious.

Without some good manure, it is not easy to raise plants on such exhausted soil as forms the habitat of lalang as a rule. This much maligned grass is in our opinion a friend to man in disguise. When the soil is composed principally of clay—and the surface humus has been all washed away, there are very few plants that can grow on it. But such land is sooner or later invaded by lalang—whose underground stems penetrate deeply, and ramify in all directions. In this way the surface soil is broken up. As the grass grows up and dies down, a quantity of organic debris begins to collect, and in course of time, affords a suitable nidus for the growth of shrubs and forest trees. If it were not for the lalang, the afforestation of such waste land would take a very long time indeed. But unfortunately lalang is very treacherous to get rid off, and is very fatal to the growth of young plants. There are very few tree seedlings, that can survive in the struggle for existence. Even such hardy trees as the coconut palms become sallow and sickly and eventually stunt and die. Para Rubber trees make a brave struggle, and if there is enough humus in the soil, soon outgrow the lalang, and if closely planted may force the latter to die out on account of the shade.

The method of stamping out the lalang must be carried out systematically. As soon as an acre or so of the land has been ploughed, holes 3' x 3' are dug out at about 20' intervals, and filled with manured humus, the seeds of *labu*—the bottle gourd, or of other species of quickly growing *acucurbita* are sown. The young plants quickly spread all over the ground. In the meantime, the ground is turned up a second time, the stems of lalang being thrown up, collected and burned.

In a couple of months, the gourd has flowered and withered away. Again, the land is hoed, and then as a rule some atropaceous plant such as chillies or egg-plants are planted in beds. The ground is by this time well freed of lalang, and is scrupulously weeded. The young plants, replanted usually from a nursery, are manured with a diluted mixture of ripened excreta and water daily or thrice weekly.

The chillies are well nigh exhausted about four months from the time of planting. They are generally succeeded by a crop of sweet potatoes, after which the land is allowed to lie fallow for a couple of months. Then the weeds are ploughed up and used as green manure mixed with farm-yard compost.

Briefly the order may be stated categorically.

1. Chilli.
2. Some leguminous plant.
3. Sweet potatoe.
4. Tapioca.

Indigo is a favourite leguminous plant to be cultivated. It requires very careful manuring, and generally yields three crops of cuttings—after which the land is allowed to rest for a few months.

By careful tillage and judicious manuring, these Chinese vegetable gardeners are able to make use of the poorest land available and to obtain good returns for their toil and investment. When lalang land has been thus reclaimed, it is not unprofitable to plant it up with rubber between the vegetables grown.—*Dr. Lim Boon Heng.*

FIFTH JOINT ANNUAL AGRI-HORTICULTURAL SHOW OF THE MALAY PENINSULA, HELD AT KUALA LUMPUR 10th, 11th, and 12th, AUGUST, 1908.

KUALA LUMPUR AGRI-HORTICULTURAL SHOW 1908.

The fifth Agri-Horticultural Show of the Malay Peninsula was held in Kuala Lumpur on the 10th, 11th, and 12th August. The Show which was opened by His Excellency Sir John Anderson K. C. M. G. was favoured by excellent weather and was by general consent considered very successful.

Working arrangements.—The system of working this year's Show was somewhat different to that of previous years in that the whole management of the Show was undertaken by one small Committee of nine members. No Sub-Committees were appointed with the exception of a committee of three who drew up the prize list in the native art section, and the Horse Committee which had entire charge of that portion of the Show.

In place of the usual sub-committees in each division Stewards were appointed for each section, whose duty it was to attend to the arrangements of the exhibits on arrival, and facilitate the work of the Judges in their section.

This change in working arrangements is I think one to be recommended, the small committee is more workable, and the selection of Stewards each having a definite section to look after is preferable to the old system of having a sub-committee of say five persons, who each left the work to the other with the result on many occasions when most needed, they were not to be found.

Show and Buildings. The site of this year's Show was the Malay Settlement Padang which is most conveniently situated and made an admirable ground for the purpose. The buildings were arranged all round the grounds with the Horse-Ring in the centre. The main buildings three in number 150' x 50' were used for Division A. Agricultural Produce Division B. Flowers, Fruits &c., and Division D. Native Arts. The Agricultural Implements &c., had a shed 100' x 50' allotted to them. A similar shed (100' x 50') was put up for trade exhibitors. Special sheds were put up for Horses, Fowls and Cattle. The total cost of buildings and staging was \$3,120.85.

Exhibits. The Forest Department put up a most interesting and instructive exhibit of forest produce including fine collection of Rotans, Gums, Damars and Getahs &c., &c. The exhibit as a whole was most creditable to the Department and was awarded a Diploma.

Agricultural Produce. In this section entries were in most cases good.

Padi. The entries in padi were very large and the samples good. The principal prizes went to the Krian District.

Rubber. It is to be regretted that entries in the rubber section were not so numerous as in previous years. This may perhaps be accounted for by the fact that the quantities required were increased to a minimum of 25 lbs. There appears to be a disinclination on the part of some owners and Directors to enter into competitions of this sort. In one or two cases the reason given for not competing, where Estate Managers were seen was that "their Directors had forbidden them to enter." The quality of the rubber shown was on the whole excellent. The prize for the best rubber in the Show was won by Mr. F. G. Harvey, Petaling Estate, with very fine sample of crepe.

An excellent exhibit of rubber packed for shipment shown by Mr. B. C. N. Knight, Jebong Estate, was awarded the Governor's Cup for the best Agricultural Exhibit in the Show.

The Sultan's Cup awarded "by points" for the most successful exhibitor in the Rubber section was won by Mr. A. D. Machado, Kamuning Estate.

Coconuts and Copra. Entries in Coconuts and Copra were numerous. The samples submitted were reported by the Judges to have been excellent and caused a good deal of trouble in placing the awards. The Cup for Copra was won by Mr. Molesworth of Jugra Estate.

General Produce. The principal items that call for attention under this heading are the very fine cloves and nutmegs from Penang. The exhibits of Tapioca in all forms were good. The entries in Cotton were numerous and the samples in many instances very good.

The Oil exhibits as a whole were not up to the standard of previous years. Coconut oil being a remarkable exception. Penang cloves oil and tapioca flour from Malacca were awarded Diplomas in this section.

Fruits and Flowers. The principal feature in this shed was the fine group of plants exhibited by Mr. Tong Tak In of Kuala Lumpur, which

was awarded a cup as a special prize. The Exhibition of plants and flowers was as a whole very disappointing.

The group put up by Mr. Coomaraswamy Pillai was perhaps the best exhibit in the section.

Fruits were not very numerous this year. Small fruits in particular being very poor. Pine-apples, Limes, Oranges, Pisangs and Durians were fair. The vegetable section does not yet receive the support it merits and it is probable that better prizes will have to be offered to induce entries in this section. An excellent stand of vegetables from the Taipeng Hills was put up by Mr. Long, Superintendent Government Plantations, Perak, and was much admired.

A very choice group of plants was shown by Mr. Fox, Superintendent of Gardens and Forests, Penang, amongst which were some fine plants of *Gesner* as and the pretty *Habenaria carnea* from Lankawei.

In the section for Preserved Fruits, Jellies and Pickles, Chutneys filled well. The principal prizes went to Mr. F. Alexander, Kuala Lumpor, who was awarded a Diploma for his exhibit collectively.

Division D. Native Arts and Industries. This section was as usual the largest in the Show and the exhibits in most cases quite up to the standard of previous years. The Perak schools put up a very large exhibit which taken as a whole was good but not quite up to the standard set up at former shows.

The Selangor schools put up some rotan work and wood carving. The embroidery and weaving section was well filled. The specimen of embroidered mat from Lower Perak was very fine. The specimen of Kian Telepoh shewn by Penghulu Morrib, Kuala Langat, was very fine and was awarded the Resident's cup as the best exhibit in native arts and industries in the Show.

Pahang sent a large number of Sarongs and took a number of prizes for them.

Malacca Lace Makers. A most interesting feature in this section was the exhibit of lacemaking from Malacca by five small children in charge of a school mistress. They showed themselves to be expert at their work and were a great centre of attraction at all times. The metal work section did not fill so well as it ought to have done. The principal feature of the section being the Brunei exhibits which took a large number prizes. Seremban Tin-ware was exhibited in large quantities. The new class opened for miniature Malay models was a huge success as far as entries was concerned but much of the interest in this class was lost through over crowding and for want of descriptive tickets. Both prizes in this class went to Lower Perak.

It might be well another year to give all models, Basket work and Rotan work a shed to themselves. The Malacca Baskets were exhibited in quantity and attracted a good deal of attraction.

Brunei Government put up a stand of silver and bronze work also sarongs &c., in addition to what they entered in open classes. The exhibit which was one that attracted considerable attention, was awarded a diploma.

The Malay Art School, Kuala Kangsar, put up a stand of silver work and pottery.

Division C. It is to be regretted that the entries in the Cattle section were not more numerous. Practically all that did come were from Perak and Malacca. The prize for the champion animal went to Mr. Brett Brussi, Perak.

There were no entries in Buffaloes and Pigs.

Poultry. The entries in the poultry section were much larger than in previous Shows with the result that there was a shortage of pens for housing. As a result arrangements in this section were bad. At the time the entries closed officially, the number of pens was full, and in addition some fifty entries were accepted on the Show ground, people bringing their birds along, some from a distance, it was not thought advisable to discourage them by not allowing them to complete. This fact accounts for the confusion in this section.

Agricultural Implements. Entries in this division were poor. The Federated Engineering Company, Kuala Lumpor, took first prize for rubber tapping tools, also for Agricultural Implements European made.

Two exhibits were shewn of coagulating machinery the one being a circular iron tank with a hand propelled paddle and the other a similar mechanism arranged so that it could be attached to the ordinary form of Shanghai bath which has a smooth glazed interior. Both these machines did their work effectively and were awarded a silver and bronze medal respectively.

Horse Section. In all 78 horses and 16 gharry ponies were entered. The champion prizes were won by Messrs. Yap Brothers for black mare over 15 hands, and for horse under 15 hands by Mr. C. E. Spooner, C. M. G. with Catucha.

Prize Winners. Amongst prize winners Penang and Province Wellesley were the most successful. The percentage of prizes to entries being very high indeed.

Next on the list come Malacca, Lower Perak, Kuala Kangsar and Krian. The later districts prizes chiefly for padi. The State of Negri Sembilan sent a large number of entries. Selangor with the exception of Kuala Langat District was poorly represented considering the fact that the Show was held in the State.

A great deal of the success of the Shows as far as entries go depends on the interest the District Officers take in the matter and without their co-operation results would be poor indeed.

General. Although entries officially closed on 3rd August "the majority were received on the last two days (2nd and 3rd)" and a large number came in late.

This caused a tremendous rush of work on the week before the Show. The entries up to Wednesday 5th August numbered 5994; in addition to this some 2000 entries were accepted after this date most of them being taken on the ground.

Articles for sale were not so readily disposed of as in previous years. This is probably due to the scarcity of money. The sellers can scarcely agree with press comments as to Museum people snapping up

the best articles before the public have the opportunity of buying, a criticism that cannot be said to apply to this year's Show.

The Show being favoured by such fine weather, realized a good sum of money from the gate which at once placed it in a sound position financially. Each subscriber of \$10/-, and all judges, Stewards and Exhibitors were admitted free. Over 1,000 exhibitors tickets were given out. About 1,500 school children were admitted free.

The F. M. S. Railways Department again undertook the conveyance of exhibitors 3rd class and exhibits free of charge. The British India Steam Navigation Company offered 50 free tickets from Penang to Port Swettenham. The Straits Steamship Company allowed a 25% reduction on all bonafide exhibitors and exhibits concessions that were much appreciated.

Accommodation of visitors. Special arrangements were made for the accommodation of visitors to the Show. The Victoria Institution was turned into a Temporary Hotel and under the stewardship of Mr. T. H. B. Phillips. The Bulls Head Mess House was put at the disposal of the committee by the Government and the management of it undertaken by Mr. Van Donop.

J. W. Campbell, Superintendent Experimental Plantations,

Kuala Lumpur.

GOVERNOR'S SPEECH.

No prettier or more convenient site could have been found than that selected on the Padang of the Malay Settlement for the fifth annual Agri-Horticultural Show of the Malay Peninsula, now being held at Kuala Lumpur. The flat plain in a small valley, surrounded by the hills that beautify the capital of the Federated Malay States, was an ideal site, while Kuala Lumpur itself is a convenient centre, not only for exhibitors but for visitors from all parts of the Peninsula. The officials learn something from each successive Show, and it was the opinion of those who have visited previous Shows that the arrangements for the display of the exhibits in classes and sections and for expeditious judging of the exhibits were distinctly in advance of anything hitherto experienced.

There were over 6,000 individual exhibits this year, and in the class for Padi no less than 608 entries were made, for Cotton 78, and for models illustrative of native life and occupations no less than 246 in the two classes. The Committee were wisely advised when they introduced the award of diplomas in addition to prizes, which will have a more permanent value to successful competitors than the money awards.

NATIVE INTEREST.

That the Show is appreciated and valued by the natives was apparent to anyone who visited the showyard on Saturday and Sunday. From all parts of the Peninsula, from Pekan and Malacca, from Perak and Negri Sembilan, as well as from Selangor and Pahang, and even from Brunei, collections of native produce manufacture and native were arriving and being placed in position by busy officials, under the superintendence of Mr. J. B. Carruthers, Chairman of the Committee, and

Mr. J. W. Campbell, the hard-worked but courteous Honorary Secretary, whose readiness to answer the numerous questions addressed to him be token a knowledge of detail acquired by weeks and months of careful organisation. It is fitting at this point to set down the names of the Committee by whom the final arrangements were carried out:—Mr. J. B. Carruthers, Director of Agriculture (Chairman); Mr. E. Burnside, Collector of Land Revenue, Selangor (Vice-Chairman); the Raja Muda, M. C. Towkay Chan Sow Lim, Mr. C.; Mr. R. C. Grey, Mr. D. A. Dalziel (Hon. Treasurer); Mr. W. J. P. Hume, Chinese Secretariat; Mr. H. R. Moullin, Public Works Department; and Mr. J. W. Campbell, Superintendent, Experimental Plantations (Hon. Secretary).

OPENING CEREMONY.

By ten o'clock on Monday, most of the exhibits had been judged, and everything was in readiness for the formal opening of the Show by His Excellency the High Commissioner, Sir John Anderson, K.C.M.G. His Excellency was escorted from the Residency by the Malay States Mounted Infantry under the command of Captain A. J. Fox, and was received at the showyard by a guard of honour of the Malay States Volunteer Rifles under the command of Captain Shaw. The guard of honour presented arms upon His Excellency's arrival, and were inspected by him before His Excellency took up his position on the steps of the Pavilion for the opening ceremony.

Here a large number of ladies and gentlemen were assembled, and the scene presented by the pretty costumes of the ladies, the uniforms of the Sultan of Selangor and his suite and the civil officials and volunteers, and the gaily-coloured dressed of the natives, was most picturesque.

MR. BELFIELD'S SPEECH.

Mr. Belfield, Resident of Selangor, said—Your Excellency, on behalf of the committee, subscribers and exhibitors at this our fifth annual Agri-Horticultural Exhibition, I have the honour to express our thanks to you for again arranging to be present to open our proceedings, and for thus evincing your continued interest in a movement which we all hope is conducing to the furtherance of agricultural development in the Colony and F.M.S. I may be permitted to remind Your Excellency that the period during which these annual Shows have been held is synchronous with that of your own residence in the Colony. The first Show was held in Kuala Lumpur in 1904, a few months only after your arrival at Singapore, and on that occasion and at every succeeding fixture you have been foremost in aiding local endeavours by sympathetic interest and practical assistance. His Highness the Sultan desires me to express his gratification that Kuala Lumpur should for the second time have been selected as the venue of the Exhibition. His Highness expresses the belief that those of our visitors who have not been here since the first Show was held will have observed some material improvements in the town and neighbourhood. He also voices the hope that Your Excellency and the visitors here to-day will find that the standard of the present Show is not in any way inferior to those which have preceded it, notwithstanding the recent period of commercial depression which has reacted prejudicially

upon all classes of the community and upon all forms of business interests. I have the honour to ask Your Excellency to declare the Show open.

SPEECH BY HIGH COMMISSIONER.

In declaring the Show open, His Excellency the High Commissioner said that Mr. Belfield had been unkind enough to remind him that he had been more than four years in this part of the world, and that, in the ordinary course of circumstances his time as High Commissioner was more than half finished. Mr. Belfield had also reminded them that this was the second time the Show had been held in Kuala Lumpur, and he was sure that those who saw it would agree that the present one showed an enormous advance, not only in the number, variety and quality of the exhibits, but also a great advance in the manner and method of arrangements which the Committee had shown. It was a great advantage to those who had come to the Show that it had been so well laid out, and in consequence they had not to double on their tracks and waste time going from one end to the other in search of particular exhibits. At each succeeding stage they would find something as interesting as where they had gone before. The exhibits of native industries were most interesting. He was sure, that those who looked at the basket work, and not only the basket work but the silver work, and the other varieties of native craft, would see what great strides had been made in the last few years. Not only was Malacca to the front again, but Perak had begun to progress in this direction. Ladies, he was sure would find the Perak work far more useful than the Malacca basket work, which was, after all, rather a curiosity, whereas the Perak was very useful.

BAD TIMES.

As the Resident had said, they had been passing through a time of commercial depression. Some prophets said they had got to the bottom and were now on the up-grade. He was sure everyone hoped it was so. But as far as the planting industry was concerned he was not sure they had not been a little in need of a bad time. Everything was so prosperous and prices were so high that there was a disposition on the part of planters to think they had fallen into a fortune and had only to sit still and reap it. It was one of the advantages of bad times that it made people study economy as use their brains to devise improved methods of production and of handling the product. If the bad times through which they had been passing had that result with the planting industry of the Federated Malay States, he felt sure, instead of considering it a bad time, they would all look upon it as a blessing in disguise. Whether or not, all cordially wished the bad times at an end. Towards the end of last year, the planting industry was not only feeling the stress of bad times, but also there was not quite so much harmony among themselves as they ought to expect in such a happy family. Usually, the only enemy of the planting community was the Government; perhaps he should say the industry had now two enemies, the Government and the white ant. (Laughter). He scarcely knew which was the worst. Perhaps on the whole the white ant left a more permanent mark on the industry than the Government.

ADVICE FROM PLANTERS.

Last year the planters were doing a little quarrelling among themselves—only a family disagreement,—but now it seemed to have died out. Anyhow the newspapers had dropped it, and so he supposed it had ceased to be interesting. But he taught it was partly due to that incident that they had the formation of that useful body—the Planters' Association of Malaya. The formation of the Association was not only of importance to the planting industry but also to the Government, and was, His Excellency thought, a step in the right direction. The Association not only served to focus the opinion of the planting community as to their wants, which everyone knew were numerous, but it also helped the Government by giving them a representative body to which they might look for advice and from which they might always expect criticism which was helpful. Since his arrival in Kuala Lumpur, he had heard from his colleague, the Resident-General, that, at a recent meeting, they had again been going for their old enemy, the Government, thinking, apparently, that as planting had been having a bad time, Government ought to have a bad time as well, and that the planters ought to have a little more of that attractive thing—the surplus. Well, when the Government embarked, a few years ago, on what many considered the hazardous policy of helping the resident planter, because they did not want to lose him, they said they would advance up to half a million dollars for the purpose of helping to clear off mortgages and to help them to weather bad times, which were certainly then much worse than now, and worse than at any time since he had been here. When that policy was started they thought there would be a rush for the half million dollars. Curiously enough, on the contrary it was a long time before people came forward. Perhaps they did not think the Government was in earnest when they said the money was there and they could have it on application, provided they gave good security.

GOVERNMENT LIABILITIES.

About the same time it was found that the British public was very eager to take a hand in planting, and very little call was made upon Government funds. When the British public had enough shares in the planting industry, the planters turned again to Government, and the half million was soon gone. Then the planters came again to the Resident General, and he (the High Commissioner) agreed to go another half million. That went very quickly, and then they offered a third. With that third half million the question arose whether Government was to go on and where it was to stop. The matter was considered anxiously and carefully. Government had many duties, responsibilities and liabilities, of which the outside public knew little or nothing. Of these liabilities, some were prospective, some actually incurred; some were liable to be increased and some were not yet settled. The Government had to bear in mind all these, for the surplus was not so very large. He assured them that the Government could dispose of every dollar of it. However, that did not weigh so much with the Government as the fact that the loans were to a large extent going to those who could not be described as resident planters, the class they

wished to attract and keep in the country, but to the man who took up planting as a speculation, and wanted a loan to save the speculation until he was able to place it on the market at a profit.

SPECULATION.

It was no function of the Government to assist speculation of that sort, and they came to the conclusion that the time had come to restrict loans exclusively to those for whom they were originally intended, the resident planters, the men they wished to come into the country to form a strong planting community with their interests here. There were also instances of estates which in the hope of the Government purse proving bottomless had been started with insufficient capital, and there was some likelihood, if they stopped, that the estates would be closed down. There could be no hard and fast rule, but they decided after consideration to make further advances strictly for maintenance. They did not want land under cultivation to fall back or to be abandoned, and thus be a reproach to the F.M.S. and perhaps become an injury to the industry. Therefore, for the present, no more loans would be granted, except for the purpose of maintaining existing plantations. While that might disappoint some, he was satisfied it was best in the interest of the country, and those who came out on speculation, with no intention of becoming resident planters had better clear out of their speculations as soon as possible. The man who went into a concern merely with the intention of making a little money out of it as an incidental speculation was not as likely to contribute materially to the advancement of the industry as he who went into planting and lived and worked himself on his land. He was the man they wanted to encourage, and to him they had to look for the real development of the industries of the Malay Peninsula.

LABOUR.

One other matter of interest to the planting community—the labour question. It was gratifying to know that labour had been coming in freely. In the last year just over 60,000 labourers had come, and in the first half of this year 30,000, very nearly. With these numbers he thought there should be no more complaints of the shortage of labour. The means taken to increase the supply had been subjected to a good deal of criticism. He could not say that he thought the Tamil tax an unfair one. At any rate, they must continue it for some few years. Possibly, by and by, when the country was well-known and the demands for fresh labour diminished, it might be possible to remove it, but he was afraid that, so far as they could see at present, it had come to stay. When the proposal for levying a tax was under discussion in Singapore, he had stated on behalf of Government that there were certain considerations which Government would have to look to later, when it was seen how the money went. The other day, an amending Bill had been introduced to deal with some of the considerations that had been pressed on Government, mainly by the older-established estates. The Government, naturally, did not wish to press unfairly upon them, and the amendments they had introduced—and which would be submitted to the Planters' Associations so that Government might have the benefit of their criticism—were two.

First of all, they wanted, out of the profits of the tax, to give some acknowledgment to those who had already established a considerable labour force when the tax came into existence. The equity of this, he was sure, they would agree with. Whether the money, when it was distributed, would come up to their expectation, was another matter. He was afraid not.

SELF-HELP REWARDED.

Another point was to give relief to those planters who were in the habit of sending their own kanganis to India to recruit labour. One important object the Committee and the Government had in view was to get rid of the great evil of crimping, and by making the tax universal they thought they had destroyed whatever incentive there was to crimp. They thought there was now sufficient labour and no inducement to a man to steal another's coolies. But so long as some sent their own kanganis to India to recruit obviously these planters were doing more than men who sat down and waited for the labour to come to him, and only took it off the hands of the Government. Therefore, the Committee had recommended—and the Government was prepared to agree—that some allowance should be made to those who sent their own kanganis to India. It was only fair, His Excellency thought they would agree, to take away this grievance and to do something to relieve them from the acute evil of crimping.

His Excellency concluded by apologising for trespassing upon their patience, but he did not often have the opportunity of speaking to them. He then declared the Show open.

Reprint from Straits Times August 12.

LIST OF WINNERS.

(As Reported by The Malay Mail)

DIVISION A. I.

1. Padi, best sample of any named variety.
 - 1st prize. Peng. Haji Ahmat, Malacca.
 - 2nd prize. Che Wang, L. O., Penang.
 - 3rd prize. Syed Usop, Chigar Galah, K. Kangsar.
 Highly Commended Penghulu Long, Malacca.
2. Pulut, best sample of any named variety.
 - 1st prize. Mohamed Bin Yupe, L. O., Penang.
 - 2nd prize. Raji Bosah Penghulu, Krian.
 - 3rd prize. Peng. Mat Tedong, Malacca.
3. Rice, best sample, prepared by machinery.
 - 1st prize. Wan Yeop Ibrahim, Parit Buntar.
 - 2nd prize. Khy Heng Bee, Sungei Penang.
 - 3rd prize. Mohamed Dato, Karamat Rd., Penang.
4. Rice, best sample, prepared in a lesong.
 - 1st prize. Peng. Hussain, G. Semmengol, Perak.
 - 2nd prize. Penghulu, Jebong Matang, Perak.
 - 3rd prize. Kamaludinbin Haji Baludin, Penang.

5. Best collection of different Padi, in the ear, 10 heads in each sample.
 - 1st prize. Penghulu Ijok, Perak.
 - 2nd prize. Puteh Penghulu, Alor Pongou, Perak.
 - 3rd prize. Mat Noh, Penang.
6. Best Padi and Pulut, grown in one mukim, to be exhibited by the Penghulu of mukim, and so certified by him.
Each exhibitor to produce an affidavit, sworn before a Magistrate, that his whole exhibit was grown in his own mukim last padi season.
 - 1st prize Hussin Penghulu, Griong Semmenggol, Krian.
 - 2nd prize Hussin bin Katib Hassan, K. Kangsar.
 - 3rd prize Kamaludin bin Haji Baludin, Penang.

DIVISION A. II.

Governor's cup. Awarded to Mr. B. C. N. Knight of Jebong Estate, Simpang, Perak, for his best Sample of Rubber in the Show.

Sultan's Cup. Awarded to A. D. Machado, Kamuning Estate.

7. Para Crepe, best sample.
 - 1st prize. F. J. Harvey, Petaling, Estate.
 - 2nd prize. J. B. Douglas, Terentang Estate, Negri Sembilan.
 - 3rd prize. A. D. Machado, Kamuning Estate, Perak.
 - H. C. B. C. N. Knight, Jebong Estate.
 8. Para sheet or Biscuit, Packed in boxes as shipped from the estate.
 - 1st prize. O. Pfenningworth, Highlands and Lowlands Estate.
 - 2nd prize. Crawford, Caledonia Estate, P. W.
 9. Para Block, dry.
 - 1st prize. A. D. Machado, Kamuning Estate, Perak.
 10. Para Block, wet.
 - 1st prize. A. D. Machado, Kamuning Estate, Perak.
 11. Rambong in any form.
 - 1st prize. Bukit Rajah Estate.
 - 2nd prize. Atherton Estate, Port Dickson.
 - 3rd prize. J. Molesworth, Jugra Estate.
 12. Rubber, (Para) packed in boxes as shipped from the Estate.
 - 1st prize. B. C. N. Knight, Jebong Estate.
 - 2nd prize. F. J. Harvey, Petaling Estate.
 - 3rd prize. H. M. Darby, Vallambrosa Estate.
 13. Any other Rubber. (Plant from which obtained must be stated with each).
 - 1st prize. A. D. Machado, Kamuning Estate.
 - 2nd prize. O. Pfenningworth, Highlands and Lowlands Estate.
 - 13A. Penghulu Md. Momot, Malacca.
 - 13A. Sinnaiah, Kuala Kangsar.
 - 13B. Penghulu Abdul Gani, Malacca.
- Best Rubber in the Show, Petaling Estate, 2 sorts crepe.

DIVISION A. III.

14. Coconuts, unhusked, best sample.
 - 1st prize. Penghulu Hassan, Penang.
 - 2nd prize. Penghulu, Sungei Pringgi, Matang.
 - 3rd prize. Haji Latib, Setapak, Kuala Lumpur.

15. Coconuts, husked, best sample.
 - 1st prize. Penghulu Sungei Pringgi, Matang, Perak.
 - 2nd prize. Penghulu Mat Suh, Kuala Selangor.
 - 3rd prize. Haji Noordin, Setapak, Kuala Lumpor,
 - Highly Commended. Mat Mahin Rambau, Negri Sembilan.
16. Coconuts, best bunch.
 - 1st prize. Penghulu, Jugra and Bandar, Kuala Langat.
 - 2nd prize. H. M. Darby Vallambrosa Estate.
 - Special prize. Penghulu Semmiah Ulu, Langat.
17. Coconuts, husked, best sample.
 - 1st prize. R. M. Connolly, Ipoh, Perak.
 - 2nd prize. Penghulu Haji Nasau, Malacca.
 - 3rd prize. Penghulu Ijok, Perak.
 - Highly Commended, H. M. Darby, Vallambrosa, Klang.
18. Copra, best sample, 5 catties.
 - 1st prize. Mr. Valpy, Klanang Estate, Kuala Langat.
 - 2nd prize. Abu Bakkar bin Ishak, Penang.
 - 3rd prize. Penghulu Mat Sub, Kuala Selangor.
 - Highly Commended. Penghulu, Sungei Pringgi, Matang, Perak.
- 18a. Copra, 50 catties.
 - 1st prize. (Cup). J. Molesworth, Jugra Estate, Jugra.
 - 2nd prize. (Silver Medal). K. T. Koomarasawmy Pillai, Kuala Lumpor.
 - Highly Commended. Mr. Valpy, Klanang, Kuala Langat.
19. Tapioca, roots, best sample, 3 roots.
 - 1st prize. Brahin, Penang.
 - 2nd prize. Kulop Mat Jiri, Kuala Kangsar.
20. Tapioca, pearl, best sample. 2 catties.
 - 1st prize. S. Moorehouse, Malacca.

PERSONAL.

Mr. H. C. Pratt, the Government Entomologist, has been transferred from the Institute for Medical Research to the staff of the Director of Agriculture and will be engaged in the first instance in completing his investigations published last May in this Bulletin into the life history of *Termes Gestroi*, the white ant attacking living rubber trees. He will also carry on experiments in the direction of prevention and cure of this ubiquitous pest.

GROWTH OF GUTTA PERCHA.

THE EDITOR AGRICULTURAL BULLETIN,

Singapore.

DEAR SIR,

In reference to Mr. Burn Murdoch's interesting article on the rate of growth of forest trees in the F. M. S. the following measurements of two Getah Taban trees growing amongst my young Para trees may be of interest. The trees I may mention are situated on a gentle slope and have been practically clean weeded the whole time. Measurements taken 3ft. from the ground.

			TREE NO. 1.	TREE NO. 2.
18th	January	1906	14 $\frac{1}{8}$ "	11 $\frac{1}{4}$ "
25th	April	1906	14 $\frac{1}{2}$ "	11 $\frac{3}{4}$ "
18th	October	1906	15 $\frac{1}{2}$ "	12 $\frac{1}{4}$ "
18th	October	1907	17 "	14 $\frac{1}{2}$ "
5th	September	1908	18 "	15 $\frac{1}{2}$ "

Therefore during 31 months the two trees have increased in girth 4 $\frac{1}{8}$ " and 4 $\frac{1}{4}$ " respectively, or an average increase of about 1.65" per annum, against 1.69" of the 100 Taban trees at Taiping, referred to by Mr. Murdoch.

In a year or two these two Taban trees will be entirely shut in by Para trees, when there will be probably a falling off in the rate of growth, so far as girth is concerned. I shall continue my measurements.

Yours Faithfully,

G. A. L.

EMERGENCY MEETING OF THE PLANTERS' ASSOCIATION OF MALAYA.

Meeting held at 2.30 p.m., on August 27th, 1908, at the Selangor Club, Kuala Lumpur. Present:—For the Perak Planters' Association: Mr. C. L. Gibson, Mr. H. S. Whiteside; Negri Sembilan Planters' Association: Mr. J. le P. Power; Johore Planters' Association: Mr. A. H. Malet, Mr. A. L. Buyers: Kuala Selangor D. P. A: Mr. A. Irving; Klang D. P. A: Mr. Jno. Gibson, Mr. A. B. Lake, Mr. R. W. Harrison; Kapar D. P. A: Mr. H. M. Darby, Mr. C. T. Hamerton; Kuala Langat D. P. A: Mr. E. Macfadyen; Kuala Lumpur D. P. A: Mr. E. B. Skinner, Mr. F. G. Harvey, Mr. C. Burn Murdoch, Mr. A. J. Fox, Mr. H. C. E. Zacharias. Batu Tiga D. P. A: Mr. H. F. Browell, Mr. P. W. Parkinson, Mr. H. L. Jarvis. Mr. R. W. HARRISON Chairman, and Mr. H. C. E. ZACHARIAS, Secretary. Mr. L. H. CLAYTON, (Visitor).

1. The Secretary, having read the notice convening the Meeting, places before the Meeting the following letters:—

No. 3278/1908.

KUALA LUMPUR, 13th August, 1908.

SIR,

I am directed to forward herewith copies of the Bill to repeal and re-enact with the amendments the Tamil Immigration Fund Ordinance (Straits Settlements) 1907, the second reading of which is proposed to be taken in the Legislative Council of the Colony on the 21st August.

2. As it is considered desirable that the Bill should be proceeded with without unnecessary delay, I am to request that any observations which the Planters' Association may wish to make may be submitted as soon as possible.

I have, etc.,

(Sgd.) S. W. MACARTHUR,

Federal Secretary.

KLANG, 19th August, 1908.

THE SECRETARY TO H. E. THE GOVERNOR,
SINGAPORE.

SIR,

Enclosed I have the honour to hand you copies of my telegrams of to-day's date with reference to postponing the final reading of the revised Immigration Ordinance.

An emergency meeting of the Planters' Association of Malaya cannot be called with less than 7 days' notice, and as the first intimation we received of the Second Reading of the Bill being taken on the 21st inst., was in a letter from the Federal Secretary dated 14th inst., it was impossible for us to call a meeting in time.

I have, etc.,

(Sgd.) R. W. HARRISON,

Chairman, P. A. M.

2. Competition for prizes shall be open only to Exhibitors resident in the Colony of the Straits Settlements or the States of the Malay Peninsula.
3. Competition in Divisions A. B. and E. shall be confined to exhibits grown or manufactured in the Colony of the Straits Settlements, or the States of the Malay Peninsula.
4. The Committee will appoint Judges, from whose decision there shall be no appeal.
5. The Judges will have authority to withhold a prize when they are of opinion that there is not sufficient merit to justify an award, and also to award special prizes for anything not contained in the schedule.
6. No Exhibitor shall be awarded two prizes in any one class, or more than five prizes in the same division.
7. The arrangement of the exhibits shall be subject to the directions of the Committee.
8. The Committee reserves to itself the right to refuse any entries that they may think fit to reject, and to cancel any class at any time up to seven days previous to the first day of the Show.
9. Exhibitors desiring free transport by Railway, must give notice to a District Officer, or the General Secretary, who will if they approve of their exhibits, provide them with numbered tickets and a free third class pass on the Railway for themselves and their exhibits. A reduction of 25 per cent. off the usual freight will be made by the Straits Steam Ship Co. on all *bonâ fide* exhibits. Other reasonable expenses in connection with transport of exhibits will be considered by the Committee.
10. Entries in all Divisions must be in writing, and reach the General Secretary at least seven days before the opening day. In the case of Horses and Dogs three weeks.
- No exhibit in Divisions A. C. E. and F. will be received later than 6 p.m. on the same day previous to the opening day.
- Exhibits in Divisions B. and D. will be received up to 8 a.m. on the morning of the Show.
11. Entries for Horses under Classes 223, 224, 225, 226, 227, 229, 230, 232, 233, 236 and 237, must be accompanied by a certificate of height from any Sporting, Turf or Polo Club in the Colony or F.M.S. or from a qualified Veterinary Surgeon.
12. Exhibitors in Divisions C. and D. must provide for the care and maintenance of their own exhibits.

13. No exhibit (except live animals) may be removed from the ground before the close of the Show. Exhibitors will be provided with a card which must be produced at the close of the Show before they can be allowed to remove their exhibits.

14. The Committee is empowered to exclude, or remove, any animal which in their opinion is not in a fit state for exhibition.

15. Exhibitors in Divisions C. and D. will only be permitted to remove their animals from the Show Ground on obtaining an order of removal from the General Secretary or the Hon. Secretaries of these Divisions.

16. All reasonable care will be taken to provide for the safety and careful preservation of exhibits of every kind sent to the Show but it must be clearly understood that the Committee does not hold itself responsible for the loss of, or the damage to, any exhibit either in transit or during exhibition. Provision will be made for keeping small articles of value under lock and key at night.

17. Space will be provided for tradesmen and others wishing to exhibit articles for sale, but not for competition. The sale price must be clearly specified.

18. Government exhibits shall not be eligible for prizes in any class. Winners of prizes of \$10 and upwards, may have a silver medal if they prefer it to money.

REPORT OF THE PENANG AGRI-HORTICULTURAL SHOW.

Held on the 9th, 10th and 11th August, 1909.

President—HON. R. N. BLAND.

General Purposes Committee—C. GUINNESS, GAN QUOH BEE, HON JOHN TURNER, DR. JAMIESON, W. LANGHAM CARTER, F. G. PIGOTT, S. E. A. LINTON, P. A. YEARWOOD, ELTON BELL, W. H. MACARTHUR, B. NUNN, H. MUIR.

Chairman—A. CAVENDISH.

Hony. Treasurer—D. W. GILMOUR.

Hony. General Secretary—WALTER FOX.

The Sixth Annual Agri-Horticultural Show was held in Penang, on the 9th, 10th and 11th of August. The last Show here was held exactly four years ago and by a coincidence on the same dates.

The occurrence of two public holidays in the week fixed for the Show was the primary reason for the selection of these dates, a factor of considerable importance to the officials connected with the management of the Show and also to the public in general.

H. E. The Governor, Sir John Anderson, G.C.M.G., opened the Show in brilliant weather, and spoke at length on Agricultural topics and commented in detail on the advance made since the previous Show.

The statistics given below set forth the advance that has been made, and justify the freely expressed opinion that it was the most successful Show of the series hitherto held.

2. The Prize Schedule was divided as before into the six following Divisions :—

Division (A)	Agricultural Produce	87 Classes.
"	(B) Flowers, Plants, Fruits and Vegetables..	103	"	
"	(C) Stock and Dairy Produce	32 "
"	(D) Horses and Dogs	28 "
"	(E) Native Arts and Industries of which			
	13 Classes were confined to Schools	..	59	"
"	(F) Agricultural Implements & Miscellaneous	30	"	

3. The Show attracted 1,935 Exhibitors as against 1,541 in 1905 who came from the following places :—

Penang and Province Wellesley	1,001
Perak	322
Malacca	180
Negri Sembilan	267
Selangor	134
Brunei	14
Singapore	9
Kedah	6
Johore	2

1,935

4. The following table shows the number of Exhibitors in each Division, the place from which they came and the prizes gained :—

	Agricultural Produce.	Flowers, Fruits and Vegetables.	Stock and Dairy Produce.	Horses and Dogs.	Native Arts and Industries.	Agricultural Implements and Miscellaneous.				
	A	B	C	D	E	F	Total.	Prizes. \$	Cups.	Medals
Penang and Province Wellesley	329	236	147	82	183	24	1,001	1,206	17	41
Perak	130	67	27	2	88	8	322	701	..	4
Malacca ..	79	47	9	..	43	2	180	104
Negri Sembilan	83	32	13	1	137	1	267	61
Selangor ..	63	33	3	..	35	..	134	89	5	4
Singapore ..	2	7	9	10	4	3
Brunei	2	12	..	14	42
Johore	2	2	..	1	..
Kedah	5	1	..	6	..	1	2
Total ..	690	415	199	97	499	35	1,935	\$2,204	28	54

5. The figures work out to about the same proportion, as regards the percentage of prizes gained to the number of competitors as was the case at the previous Show, Penang and Province Wellesley, heading the list with 54% of the prizes and 51% of competitors.

6. The Show was patronised to an unprecedented extent as shown by the gate money which amounted to \$1,030.69 on the first day, \$808.96 on the second day, and \$460.65 on the third day. The prices of admission were \$2 for the opening ceremony on the first day up till 2 p.m., afterwards 25 cents. The charge of admission on the second day was 25 cents and on the third day 10 cents. The second day presented an unusually animated appearance when school children of all denominations were admitted free.

7. *Housing of Native Exhibitors.*—The Committee were fortunate in being allowed to use the barracks till lately occupied by the F.M.S. Guides overlooking the Show grounds to accommodate Native Exhibitors and their families and thus what at one time seemed to be a difficult problem to solve was rendered comparatively easy. The

thanks of the Committee are due to Messrs. Thomas and Hamilton for the excellent arrangements made for transporting native visitors with their Exhibits to and from the Show grounds.

Mr. Thomas organised and supervised a special tram service from the Jetty to the main entrance to the Residency whilst Mr. Hamilton spent a good deal of time and trouble in meeting and seeing off relays of native visitors.

8. The thanks of the Committee are again due to the Government of the F.M.S. and the Railway authorities for granting free transport to and from Penang over their lines to the numerous Exhibitors and Exhibits. But for this assistance it is doubtful whether half the number of natives who came would otherwise have attended.

The Straits Steam Ship Company were good enough to grant a rebate of 25% off the freight of all *bona fide* Exhibits whilst Messrs. Huttenbach, Liebert and Company kindly offered 50 free deck passages to and from Port Swettenham by the s.s. "Kistna."

9. *Finances.*—The usual contribution of \$2,000 each from the Governments of the Colony and F.M.S. were given and a sum of \$1,000 was voted from the Penang Municipal funds which together with a balance from the last Penang Show of \$748.65 formed a nucleus of \$5,748.65. The subscriptions amounted to \$5,337.71 and Silver Cups to the value of \$600 were generously presented by certain Associations, Firms and private individuals.

At first the subscription came in very slowly but later the total receipts came to \$11,086 which was considered sufficient to cover all expenses. The Committee wish to thank the Penang and Province Wellesley public for their generosity and support. It should be added that had the Committee known earlier that such a magnificent sum would have been at their disposal, much improvement in the way of arranging the Exhibits could have been effected, thus the somewhat ugly rectangular sheds for housing Native Industries would have been discarded for a series of sheds for the different states so as to have presented a more realistic view of the life and industries of the natives; perhaps the best shape of sheds for this Division would have been circular or octagonal with radiating avenues. The central building could be reserved for articles of common manufacture in the several states, whilst the avenues could be devoted to each of the different states, or might have been set apart for industries peculiar to any particular State or District, such an arrangement would not only be picturesque but would foster emulation and competition in rival industries.

10. *Buildings.*—The buildings were on a much more extensive scale than before; whereas at the former Show the floor area was 45,427 square feet, the area on this occasion was no less than 71,999 square feet. The arrangement of the buildings were also a great improvement; they were erected around the sides of the Parade Ground in a continuous series, whilst the open space in the centre

served as the ring for competition in the Horse Classes. For information the following table shows the sizes of the sheds for each Division, and the cost for the whole :—

	Square feet
Secretary's Office	450
Ticket Boxes at Entrance	72
Flowers, Fruits and Vegetables	10,665
Trade Section	21,000
Poultry and Birds	1,080
Dogs	1,080
Buffaloes and Cattle	3,072
Sheep	720
Pigs	2,860
Native Industries	15,000
Agricultural Produce	16,000
	<hr/> 71,999
Including cost of above	\$4,634.90

The course for exhibiting horses, ponies and carriages measured 145 feet along its parallel sides and the ends were connected by semi-circles of 80 feet radius, the total distance round being nearly 550 feet.

Much credit is due to Mr. S. E. A. Linton, of the P. W. D., for the care and trouble he took in drawing the plans and supervising the erection of the buildings.

Nature and Quality of the Exhibits.—Speaking generally the standard of excellence was equal to that of former Shows, and in some cases far exceeded it. Taking the Divisions in their order it will be useful to note the points of interest and improvement shown.

DIVISION A.

12. *Agricultural Produce.*—This Division was in charge of Mr. P. A. Yearwood as Honorary Secretary, and whether looked at from the number of exhibits, or their importance, easily stands out as the back bone of the Show. In the 87 classes no less than 690 competitors took part. For convenience of classification it was divided into the following Sections : I. Paddy, II. Rubber, III. Other Food Products, IV. Spices, V. Oil Cakes, etc., VI. Getah Gums and Resins, VII. Fibres and Miscellaneous. In almost every class the keenest competition took place, and especially in the staple products of rubber, rice, cocoanuts, copra and tapioca. Undoubtedly the most important was the Rubber Section in which magnificent samples were on view.

It is unfortunate, however, that in several instances competitors did not comply with the conditions laid down, and thus two magnificent cups offered for competition were not awarded by the Judges.

It would perhaps be better in arranging the Prize Schedule for future Shows, to offer at least three prizes in each class, and to ask the Judges to specify the number of marks gained by the 1st, 2nd and 3rd prize Exhibits respectively, to indicate the Exhibits in their order of merit. It would certainly be more satisfactory to competitors, and also more interesting for the public, to learn the relative value of the different Exhibits, for instance when only one prize was awarded there was no means of knowing the comparative excellence of the next Exhibit in merit, which might possibly have been only slightly inferior to that gaining the first prize. The method of judging by points would enable one to see how the winning Exhibits in rubber for instance, obtained their marks, whether for strength and resiliency, colour, uniformity, and so on. A most instructive rubber Exhibit was sent by Messrs. Behn, Meyer and Company, as Agents, consisting of a series of long sheets which had been coagulated by the new coagulant called "Purub." The merits claimed for this method of preparation are its rapidity of action (the specimens shown had been rolled up six hours after coagulation) and the fact that it is a better preservative, and does not in any way injure the quality of the rubber. The F.M.S. Agricultural Department are to be congratulated on the excellent and instructive series of Exhibits staged by them, consisting of an Entomological Section, showing the noxious termites in their various forms; specimens of their nests, and sections of trees riddled by them. Adjoining was the Mycological Section showing various plant diseases, especially those which attack rubber. Examples of actual trees showing bad, and good, methods of tapping and the results of each were on view. Close by were collections of fibres, oils, and a small camphor still at work. The next Exhibits in value to the rubber were the cocoanuts. These as usual were sent in vast numbers, 213 Exhibitors showing in one or other of the four classes; Perak carried off most of the Prizes. *Copra*, which has been in such great demand lately, with steadily rising prices, and for which an improved method of preparation has been suggested, was very well represented, and some very good samples were shown. The common fault, however, was noticed that some of the samples had been made from unripe, and others from badly dried, nuts. A small sample sent from Ceylon for comparison was of good quality, but received no award from the Judges. Tapioca was well shown, and contested, the first prize being easily won by the Manager of Malakoff Estate. Cloves and Nutmegs were sent in by the Penang growers in excellent samples, and had no difficulty in excelling those sent from other places. Penang Exhibitors were also successful in another important Section, Paddy, in which they more than held their own. It was disappointing to see the few poor specimens sent from Krian District, where the finest rice in the Peninsula is grown, under an irrigation scheme carried out by Government at great expense. The other Exhibits such as Oils, Pepper, Arrowroot, Dragons-blood, Gambier, Gums, Dammar, Tree Cotton, and Coffee were all more or less good in quality and quantity but call for no special remarks.

DIVISION B.

13. *Flowers, Fruits and Vegetables*.—This Division which held a most prominent position just at the Entrance Gate was in charge of Mr. S. E. A. Linton who must be congratulated on its very neat and effective arrangement. It may be said that so far as the plants and flower sections are concerned it was the best display that has as yet been seen. At the entrance to the buildings (which was in the form of a cross) and on both sides some fine groups of plants sent by the Botanic Gardens, not for competition, were most artistically arranged, whilst central tables filled with flowering plants, such as Dahlias, Cockscombs, Chrysanthemums, Asters, Orchids, etc., made a picturesque vestibule to the competitive groups. The collection of vegetables from the Government Gardens on the Perak Hills was again an attractive feature, occupying the central portion of the building, the various vegetables being all excellently grown. The plants in the competitive classes were numerous and on the whole fairly well-grown—flowers, including table decorations, were good. Considering that so far as Penang was concerned the fruit season was practically over, the Fruit Section generally was well filled, the Dukus, Chikus, and Mangoes being the best. Enormous numbers of limes were staged, and Pisangs were also largely shown, one Exhibitor showing no less than 52 varieties. The Section for Preserved Fruits was also good: Mr. Alexander's fine collection of Chutneys, Pickles, and Jellies being far the most prominent Exhibit of this kind.

DIVISION C.

14. *Cattle and Poultry*.—This Division was in charge of Mr. Elton Bell; speaking generally, the cattle were more numerously shown than at the previous Shows. Pigs, Sheep and Goats were about the same in number as on previous occasions. The Section for poultry, however, was the outstanding feature of this Division; no less than 290 Exhibitors entered. The standard of excellence on the whole was not very high, there were few excellent birds, and in many cases, ordinary fowls were sent in that stood no possible chance of gaining a prize.

DIVISION D.

15. *Horses and Dogs*.—This popular Division was in charge of Mr. W. H. MacArthur, and was very well patronised. Mr. Macmillan's fine English horses sent up from Singapore carried away first honours with the utmost ease, but notwithstanding this, competition in several classes was keen. Dogs were well shown and some splendid animals were sent in.

DIVISION E.

16. This is the second largest Division and probably the most interesting, was in charge of Mr. B. Nunn ably assisted by Mr. G. A. Hall; they had to deal with 499 Exhibitors whose Exhibits were more than usually representative. The Exhibits coming from all places, from Brunei on the one hand to Kedah on the other, in most

cases filled the various classes; and the curious and ornate workmanship of some of the Exhibits was fully equalled by their artistic designs. The Silver and Bronze Metal work from Brunei, the tin ware from Seremban, the Rambong baskets, and the delicate lace work from Malacca, and the rattan furniture, and carving from the Schools, went to make up a Show of surpassing interest. The display of weapons, mats, and embroidery generally was very good indeed, and although there were few or no Exhibits of an entirely novel character, still the Division was more than equal either in quantity or quality to anything previously seen.

DIVISION F.

17. *Agricultural Implements and Miscellaneous.*—This Division was under the care of Mr. H. Muir, and covered a wide field of Exhibits from tiny models, to steam ploughs and motors. Some classes had no entries but on the whole the Division was far better represented than formerly. Amongst the most notable Exhibits were the carriages from Messrs. Chin Seng and Company, Penang. The garden furniture consisting of trellis work, chairs, tables, rustic arches and a band stand, manufactured by the Eastern Shipping Company, and the coloured concrete tiles made at Batu Feringgi by Messrs. Huttenbach, Leibert and Company.

18. *The Trade Section.*—This covered a floor area of 21,000 square feet, and extended the whole length of Residency Road. It is difficult to say what articles could not be found among the various firms who exhibited, perhaps the most interesting were the Electrical and Machinery appliances.

19. *Judging.*—27 Judges were appointed by the Committee, they were assisted by Native experts in the difficult matter of judging the Paddy classes; and by Rajah Puteh who kindly gave her valuable advice in the Malay Embroidery Section. The Judges are to be congratulated on their decisions, which appear to have given general satisfaction, and the Committee tender their thanks to them for the great labour involved in carrying out their arduous duties.

20. *Standing Committee.*—The Standing Committee met on the second day of the Show, they decided that the Show be held in Singapore next year. Their attention was also directed to various suggestions for improving the usefulness of future Shows, notably in the matter of having Conferences on Agricultural subjects. It was suggested that Papers should be read on interesting topics, and experts appointed to personally conduct Exhibitors and others round the Show and explain the merits and other characteristics of the winning Exhibits.

21. *Protection.*—Unfortunately the Committee were without the valuable assistance of the F.M.S. Guides, who on a former occasion did such excellent service in guarding the Show by night. The police, however, carried out this difficult task satisfactorily, notwithstanding the few thefts that were reported.

22. *Presentation of Cups and Medals.*—Miss Anderson kindly presented the valuable cups offered for competition; and the 36 Silver and 24 Bronze Medals, at the close on the third day, thus bringing to an end certainly one of the most successful Shows of the series.

In conclusion the Committee take the opportunity of thanking all those ladies and gentlemen, who in their various capacities worked with such energy and good-will, and without whose hearty co-operation the Show would not have been such a great success as it was by general consent pronounced to be.

W. FOX,
Hon. General Secretary.

Rules and Regulations Relating to Exhibits.

1. All exhibits must be *bona fide* the property of the exhibitor.
 2. Competition for prizes shall be open only to exhibitors resident in the Colony of the Straits Settlements or the States of the Malay Peninsula.
 3. Competition in Divisions A, B, and E, shall be confined to exhibits grown or manufactured in the Colony of the Straits Settlements, or the States of the Malay Peninsula.
 4. The Committee will appoint Judges, from whose decision there shall be no appeal.
 5. The Judges will have authority to withhold a prize when they are of opinion that there is not sufficient merit to justify an award, and also to award special prizes for anything not contained in the schedule.
 6. No Exhibitor shall be awarded two prizes in any one class, or more than five prizes in the same division.
 7. The arrangement of the exhibits shall be subject to the directions of the Committee.
 8. The Committee reserve to itself the right to refuse any entries that they may think fit to reject, and to cancel any class at any time up to ten days previous to the first day of the Show.
 9. Exhibitors desiring free transport by Railway must give notice to a District Officer, or the General Secretary, who will, if he approves of their exhibits, provide them with numbered tickets and a free third class pass on the Railway for themselves and their exhibits. A reduction of 25 per cent. off the usual freight will be made by the Straits Steamship Co. on all *bona fide* exhibits. Other reasonable expenses in connection with transport of exhibits will be considered by the Committee.
 10. Entries in all Divisions must be in writing, and reach the General Secretary at least ten days before the opening day. In the case of Horses and Dogs three weeks.
- No exhibit in Divisions A, C, E, and F, will be received later than 6 p.m. on the day previous to the opening day.
- Exhibits in Divisions B, and D, will be received up to 8 a.m. on the morning of the Show.
11. Entries for Horses under Classes 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 259, 260, 261 must be accompanied by a certificate of height from any Sporting, Turf or Polo Club in the Colony or F.M.S. or from a qualified Veterinary Surgeon.

12. Exhibitors in Divisions C. and D. must provide for the care and maintenance of their own exhibits.

13. No exhibit (except live animals) may be removed from the ground before the close of the Show. Exhibitors will be provided with a card which must be produced at the close of the Show before they can be allowed to remove their exhibits.

14. The Committee is empowered to exclude, or remove, any animal which in its opinion is not in a fit state for exhibition.

15. Exhibitors in Divisions C. and D. will only be permitted to remove their animals from the Show Ground on obtaining an order of removal from the General Secretary or the Hon. Secretaries of these Divisions.

16. All reasonable care will be taken to provide for the safety and careful preservation of exhibits of every kind sent to the Show but it must be clearly understood that the Committee does not hold itself responsible for the loss of, or the damage to, any exhibit either in transit or during exhibition. Provision will be made for keeping small articles of value under lock and key at night.

17. Space will be provided for tradesmen and others wishing to exhibit articles for sale, but not for competition. The sale price must be clearly specified.

18. Government exhibits shall not be eligible for prizes in any class. Winners of prizes of \$10 and upward, may have a silver medal if they prefer it to money.
